LEONE S.p.a.

A historic company in the Italian business environment, Leone helped lay the foundations for the birth of modern dentistry almost a century ago. The Group is now made up of realities with a strong vocation for innovation and with a relevant international profile. During the last five years, Leone has moved on to digitization strategies with the design of innovative series of digital-ready products in line with the vision of the company, thus stimulating the modernization of the orthodontic and dental implant sector.

RESEARCH

Most of the remarkable investments of the company are reserved to the Centre for Biotechnological Research "Marco Pozzi", which is located inside the company. Studies on materials, surfaces and technical analysis for new products are carried out here. The collaboration with either Italian or foreign Universities and the Faculties of Engineering and Medicine and Surgery in Florence is very close. Training stages and scientific research are developed for the preparation of graduation thesis.

PRODUCTION

Engineers, mechanical and technical experts are making part of the manufacturing staff. Working side by side with the Centre for Biotechnological Research "Marco Pozzi" and making use of the most advanced technology, they are able to carry out the components of the two product ranges: orthodontics and implantology. All the innovations introduced in the production steps and the features of finished products are the result of consistent and in-depth studies as well as of remarkable investments.

QUALITY
PRODUCT CONTROL

The high quality of Leone production is the result of sophisticated manufacturing processes and accurate quality control in compliance with UNI EN ISO 9001, ISO 13485 and ISO 13485 MDSAP international regulations for regulatory requisitions in Australia, Brazil, Canada, Japan and USA.

TECHNICAL AND COMMERCIAL ASSISTANCE

Contact your dealer in your country as a reference. You will find the comprehensive list under the section "distributors" in our website www.leone.it

CUSTOMER
SERVICE

Leone is working non stop to satisfy the customer's expectations and is represented with dealers in 60 countries. A careful pre-sale and post-sale customer assistance is provided by qualified technical and commercial staff to meet any requirement.

WAREHOUSE

Finished and semi-finished products are stocked and organized by vertical lift automatic cabinets allowing a rationalization of the space and a fully computer based processing of the orders. Standard orders are shipped within 24 hours in Italy and 5-6 working days in the foreign country.

EDUCATION
TRAINING
UPGRADE

Equipped with every multimedia device, the facility of 1000 sq.m is entirely dedicated to lectures and to the spreading of new therapeutic techniques. Training course, live demonstrations and cultural events are being held for either Italian or foreign specialists.

In this catalogue you can find QR codes storing multimedia contents which can be downloaded directly on your smartphone. You can download free QR reader applications (e.g. www.i-nigma.com) except for the connecting charges. Videos are also available on our web-site: www.leone.it/english/orthodontics

COMPETENCE AND RELIABILITY

The Leone dealers worldwide are under constant professional improvement thanks to the technical assistance received by engineers and technical experts at Leone to get specific information on the products and solve any eventual problems from the customers.

POP® EXPANSION SCREWS

PERFECT ORTHODONTIC PERFORMANCE

POP!

Perfect Orthodontic Performance

The innovative and biomechanical
orthodontic expansion screw*

- Made of stainless steel and biomedical techno polymer.
- The male screw is not in contact with the orthodontic acrylic resin: the function of the screw will not be influenced by the quality of the technical procedure and a non-compliant curing time.
- Continuous expansion movement: the high pressure injection of the polymer allows the perfect copy of the male thread of the screw thus ensuring a steady expansion transmission without the risk of undesired turning back in the mouth.
- The self-centering rectangular guides ensure a biomechanical and absolutely controlled symmetrical expansion.
- The flat shape of the guides and their flexibility allow the gradual release of the expansion with a physiological orthodontic movement.

*PATENTED

- The flexibility of the screw allows the adjustments of any dental regress due to inconsistent use of the appliance by the patient, thus being very effective with holding devices following a rapid expansion treatment.
- The high adaptability of the appliance enables a comfortable application in the mouth in the days following re-activation.
- Two embossed arrows on the body indicate the direction of opening. When using a color of acrylic resin similar to the polymer body, a white arrow provided with the plastic placement tab may be easily applied to make the direction of activation visible.
- The placement plastic tab, made of two pieces combined with a unique geometry, allows a perfect protection of the holes from the acrylic resin during the packing procedure and facilitates the removal after the curing cycle.
- The screw body is available in 6 colours.

- The new **POP[®] MICRO SECTIONAL SCREW** is added to the already known POP SCREW range to increase the therapeutic chances.
- Made of stainless steel and biomedical techno polymer.
- The male screw is not in contact with the orthodontic acrylic resin: its functionability will not be influenced by the quality of the technical procedure and/or of non-compliant curing time.
- Continuous expansion movement: the high pressure injection of the polymer allows the perfect copy of the male screw thread thus ensuring a steady expansion transmission without the risk of undesired turning back into the mouth.
- The flat shape of the guides and their flexibility allow a more gradual deliver of the expansion forces for a physiological orthodontic movement.
- The metallic anchorage side of the screw has two through-holes in order to increase retention into the acrylic.
- The flexibility of the screw could compensate slight relapse due to inconsistent use of the appliance by the patient.

POP[®] Micro sectional screw

- The high adaptability of the appliance enables a comfortable application into the mouth even in the days following re-activation.
- Two embossed arrows on the body indicate the direction of opening. When using a color of acrylic resin similar to the polymer body, a white arrow provided with the plastic placement tab may be easily snapped on to make the direction of activation more visible.
- Available in 6 colors.

The Leone expansion screws for removable orthodontic appliances derive from 80 years of extensive research, design and millions of clinical cases. The entire production process takes place in Italy with computer aided automated machines. The screws are made of biomedical stainless steel of the highest quality and male screw threads with centesimal tolerances and total absence of surface roughness. The bodies and the guides are made with tolerances of ± 0.01 mm which ensure stability and precision. The wide range available allows the production of any type of removable device.

SPECIAL PURPOSE EXPANSION SCREWS

The assortment of special expansion screws proposed by Leone derives from over 30 year experience in the manufacture of expansion screws. The screw selection ranges from the Pagani classical fan-type screw, to the Bertoni three directional ones up to the kit for the construction of the Twin Wing class II corrector.

The special purpose expansion screws are made of biomedical stainless steel with a mechanical tolerance superior to 1/100 mm. The thread parts are absolutely smooth and they ensure great sturdiness, good friction and prevent from any unwanted turning back.

TWIN WING ^{new}

CLASS II CORRECTOR KIT

A0840-05 1 appliance

Thanks to our experience gained with MAD appliance and based on the fundamentals of the most widely used orthodontic appliance for the treatment of Class II patients with mandibular retraction, we have miniaturized and reengineered the Forward! to manufacture the Twin Wing.

The kit, especially designed for the realization of this innovative appliance, contains all the components for an easier and more precise construction.

The appliance, thanks to the 70° inclination between the upper screws and the lower wings, scientifically and clinically proven as the most efficient for the stimulation of the mandibular growth, allows the millimetric advancement of the lower jaw.

Moreover, in case of deep bite, since the occlusal surface can be kept free from the presence of block, it is possible to exclude some teeth from the contact with the acrylic, promoting a guided extrusion and consequently the resolution of vertical problems.

The kit for the construction of 1 appliance is made up of:

- 2 upper screws, 1 right and 1 left
- 2 lower wings with steel frame, 1 right and 1 left

- 1 lower left wing with steel frame

Leone palatal expanders have been known worldwide for more than 50 years and are now the most complete range of expanders in the market. The 620 series is a superior product made in various dimensions with many advanced features including laser welding of the extension arms into the body of the expander for greater strength and stability.

The automated manufacturing process and quality control with the highest standards allow us to confidently say that we are offering the best palatal expanders in the world today.

RAPID EXPANDER

The best-selling palatal expander in the world

Made entirely of biomedical stainless steel. The housing design is completely smooth, with no rough areas for a secure hygiene. The expander limit, a directional arrow and the lot number are laser etched into the surface of the expander body. Supplied with a swivel key with handle and instructions for use to facilitate the patient endoral activation.

The arm bending and self-locking instrument REF P0620-00 (page 35) is also available.

Pack of 1

A0600-00

PROTECTIVE TAB* FOR HAAS-STYLE PALATAL EXPANDER

Made of two parts it allows for safe and easy protection of the activation holes from resin for rapid expanders A0620 type and the realization of expanders with palatal acrylic plate.

Pack of 10

1 Unlock the expander with 1 activation hole and fit the bottom into the space between the two bodies, then lock the expander again.

3 Simply apply the upper part of the tab which is shaped to cover and protect the holes on screw's head from acrylic.

4 Once embedded into the acrylic plate, remove the top of the tab and, after cutting the resin, unlock the expander for some holes, and the rear part will also be easily removed.

*PATENTED

RAPID EXPANDER WITH PRE-BENT ARMS

Exactly the same as A0620 expander for all technical features and materials used, but designed with pre-bent arms to facilitate the work in the laboratory. The front arms are more inclined than the rear arms to allow the positioning of the expander's body in the most comfortable way for the patient with the best biomechanical results. Provided with one swivel key with handle and instructions for use to facilitate the patient endoral activation.

Pack of 1

Swivel key included in the package

		1,5 mm	16 mm	11 mm	0,8 mm	50
		1,5 mm	18 mm	13 mm	0,8 mm	60

RAPID EXPANDER WITH TELESCOPIC GUIDES*

The innovative telescopic guides assure a constant friction throughout the expansion movement, a perfect stability and small sizes. It self deactivates when maximum expansion capacity has been achieved preventing from overtreatment. The 7 mm expander is ideal to treat very narrow palates. The expanders with 10 and 12 mm sizes feature a compact design for ease of arm bending and reducing the overall dimensions of the device. Supplied with a swivel key with handle and instructions for use to facilitate patient endoral activation.

The arm bending and self-locking instrument REF P0620-00 (page 35) is also available.

Pack of 1

avoid the possibility of spontaneous deactivation in the mouth

*INTERNATIONAL PATENT

MICRO EXPANDER

Featured by a significantly smaller body bulk than other competing expanders.

It features two extra-long arms also performing support for anteriors and ensuring excellent stability and comfort for the patient.

The micro expander can also be used for the expansion of the lower jaw.

Provided with one swivel key with handle and instructions for use to facilitate the patient endoral activation.

The arm bending and self-locking instrument REF P0621-00 (page 35) is also available.

Pack of 1

new

RAPID EXPANDER WITH ORTHOGONAL ARMS

The new Leone anatomical expander is the ideal solution for patients who need orthopedic maxillary expansion, as it allows the manufacture of devices with limited dimensions, maximum stability, comfort and safety. The small size of the body and the orthogonal arrangement of the bending arms allow an optimal positioning of the expander even in case of severe contraction and favor the biomechanical control of the expansion.

The unique self-centering system of the guides ensures a symmetrical and stable expansion.

The package includes a swivel key with handle and instructions for use to facilitate the home endoral activation.

The arm bending and self-locking instrument REF P0630-00 (page 35) is also available.

Pack of 1

Swivel key included in the package

- The orthogonal position of the arms reduces the overall size of the device.
- The arms are placed within a through-hole into the body and the external laser welding make them to form an integral part of the expander, thus ensuring maximum safety and comfort for the patient.
- Compared to the previous version, the outer position of the arms inside the bodies works on further reducing the overall size and facilitates the adaptation of the expander by the technician.

- The presence of a special slot on the guide pins allows the head of the male screw to keep the guides centered throughout the treatment, ensuring a symmetrical, stable expansion and minimizing the possibility of spontaneous deactivation during therapy.

- Two different placements are possible thanks to the marking of the arrows on both sides of the screw.

- Available in three expansion capacities for every therapeutic need.

	6 mm	4,5 mm	arms	body			activation turns for maximum expansion limit
			1,5 mm	12 mm	8 mm	0,8 mm	40
			1,5 mm	14 mm	10 mm	0,8 mm	50
			1,5 mm	16 mm	12 mm	0,8 mm	60

RAGNO FAN-TYPE RAPID EXPANDER AND MINI RAPID EXPANDER*

Conceived with the cooperation of Dr. Eleonora Schellino and Prof. Remo Modica

Made entirely of biomedical stainless steel. The expanding arms are laser welded to the screw body. Laser engraved directional arrows on the **MIM**® body. It is a device for the rapid expansion of the palate that allows you to get a widening of the single anterior sector of the maxillary arch, still maintaining minimum the expansion in the posterior sector. It self-deactivates when maximum expansion capacity has been achieved preventing over-treatment. The difference between the two models is the geometric shape of the front part: A0625-07 is designed to be placed as high as possible in the palate vault thus ensuring the minimum bulkiness achievable. The overall size is approximately 20-25% less than the 9 mm version. Provided with one swivel key with handle and instructions for use to facilitate the patient endoral activation.

The arm bending and self-locking instruments REF P0625-09 for expander A0625-09 and REF P0625-07 for A0625-07 mini expander (page 35) are also available.

RPE FOR TADs

PATENT PENDING

It allows the manufacturing of totally customized expanders both hybrid (teeth and TADs) and fully Bone Borne

PALATAL EXPANDER FOR TADs

It features two posterior arms, and, in the package, 4 dedicated TAD attachments are included that can be adapted to patient's anatomy and welded by the lab on the body of the screw.

The enhanced strength of the expander ensures high mechanical resistance to apply high forces necessary for MARPE therapy (mini-screw assisted rapid palatal expander) even in adult patients.

Thanks to the adaptable TADs attachments, it is possible to highly customize the rapid palatal expander on each patient anatomy, both in TADs-first and in TADs-last approach. Therefore an optimized expansion load distribution on the TADs can be achieved.

Pack content:

- 4 attachments for TAD
- 1 stainless steel wrench
- 1 strengthened swivel key with handle
- instructions for the patient to facilitate endoral activation at home

Available dedicated instrument for TADs attachment customization.

accurate positioning

according to the patient's anatomy and orientation of the TADs attachments based on the position of the TADs

PO201-00 BENDING INSTRUMENT FOR TADs ATTACHMENTS

Made by two elements, it is used to easily adapt the TADs attachments to every anatomical and treatment need. Both components are made of stainless steel and laser marked.

new

CAD·CAM
EXPANDER

PATENTED

First RPE screw series designed for a full digital workflow

RPE fully digital designed

CAD-CAM expanders allow the manufacturing of totally customized appliances with dental anchorage, hybrid (teeth and TADs) and bone borne in a full digital workflow, by using **3D Leone Designer** software.

Thanks to a manufacturing process called Laser Melting, the STL file will become a high precision sintered framework, that will fit perfectly the slot on the expander bodies thus to be joined permanently by laser welding

squared slots

The CAD-CAM expanders bodies feature, instead of the standard arms, squared slots that allow a correct oriented coupling of digitally designed customized laser melted framework and, thanks to their geometric shape, the fully transmission of the expansion forces to the teeth and/or TADs

the strongest RPE of the range

CAD-CAM expanders are manufactured by biomedical stainless steel with increased mechanical properties and a dedicated geometry of the male screw head that allow us to declare, based on in-vitro tests performed, a strengthness higher than 60kgf, about 50% higher than standard RPE. These features ensure the treatment efficiency even with maxillary expansion in adult patients with 2 or 4 TADs

strengthened swivel key

The strengthened swivel key for CAD-CAM expanders, supplied inside the package, is more resistant than standard one and its use is mandatory in order to enable the full transmission of expansion forces

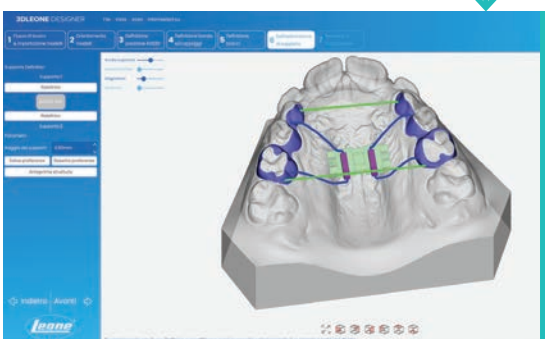

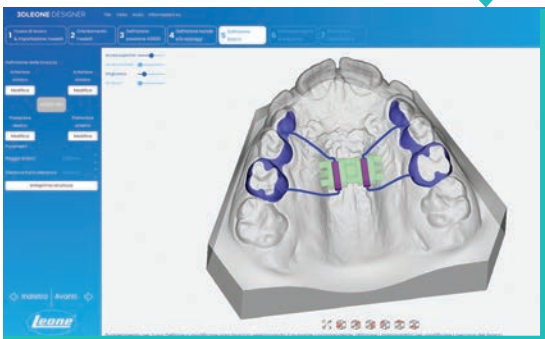

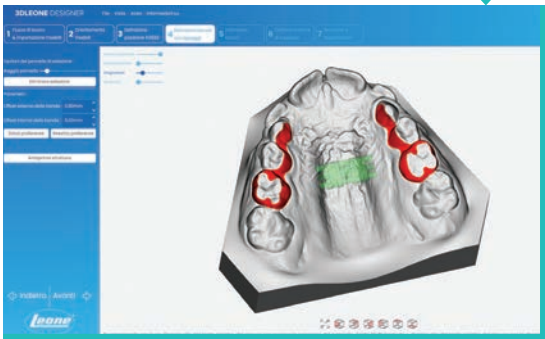

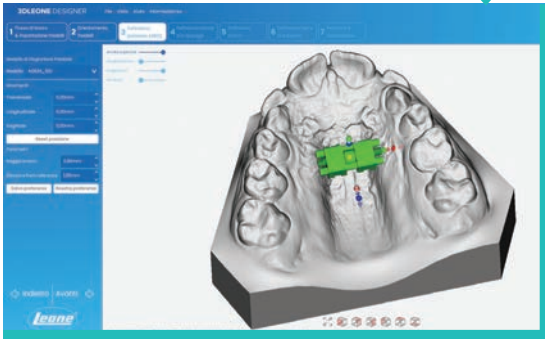

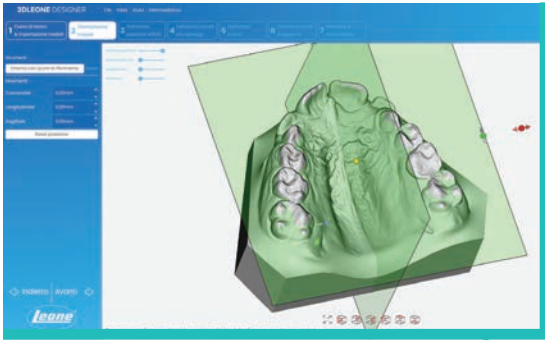

instructions to activate the expander

useful for parents and clinicians

**3D LEONE DESIGNER
SOFTWARE**

3D Leone Designer is the first software based on an easy and driven workflow for the digital design of customized framework to be coupled with our innovative CAD-CAM expanders.

Based on our experience with many different software in the dental field and due to the increased customer's requests, Leone has realized an innovative and intuitive software that allow to design, not only bands and supports, but even the expander arms with automatically placing the expander in the right position, without spending too much time and no need of digital skills.

3D Leone Designer software allow to upload and manage STL files of both upper and lower arch, obtained from laboratory scanner or directly from intra-oral scanner, and it has already in library all the range of Leone CAD-CAM expander available.

Once the digital and driven workflow will be done, the STL file designed will become, thanks to an innovative technology called Selective Laser Melting, a high precision sintered framework and will be coupled perfectly with the chosen Leone CAD-CAM expander. The framework and the expander will be then permanently laser welded.

For further information on **3D Leone Designer** software visit web site www.leone.it/3dsoftware

CAD-CAM ANATOMICAL EXPANDER

The anatomical CAD-CAM expander looks like a regular anatomical expander with orthogonal arms, but it is a device optimized for the CAD-CAM procedure: instead of the arms, features 2 squared slots that allow a correct oriented coupling for the welding of digitally designed customized laser melted framework.

The reduced overall dimensions, the exclusive self-centering guides system, the strengthened stainless steel of the male screw allow the positioning of the expander even in case of very narrow palates and high resistance and reliability throughout all the therapy even for the usage in MARPE appliances in adult patients. Expansion capacity in mm, directional arrow and lot number are laser marked on the body of the screw.

Supplied with:

- 1 stainless steel key
 - 1 strengthened swivel key with handle
 - instructions for the patient to facilitate endoral activation at home
- .stl file available on Leone website and included in the library of **3D Leone Designer software**.

CAD-CAM RAPID EXPANDER

CAD-CAM rapid expander looks like the world best sellers expander, but it is a device optimized for the CAD-CAM procedure : instead of the arms it has 4 transversal squared slots on the bodies that allow a correct oriented coupling for the welding of digitally designed customized laser melted framework. The exclusive self-centering guides system, the strengthened stainless steel of the male screw and the guides and the optimal ratio between bulkiness and dimension, ensure a reliable treatment and a perfect bio-mechanical expansion control throughout all the therapy even for the usage in MARPE appliances in adult patients. Expansion capacity in mm, directional arrow and lot number are laser marked on the body of the screw.

Supplied with:

- 1 stainless steel key
 - 1 strengthened swivel key with handle
 - instructions for the patient to facilitate endoral activation at home
- .stl file available on Leone website and included in the library of **3D Leone Designer software**.

LEAF EXPANDER® MEMORIA® LEAF SPRING ACTIVATED EXPANDER*

This device is an evolution in the design of the previous spring-loaded expander, designed with technical and scientific collaboration of Dr. Claudio Lanteri and Mr. Filippo Francolini. This new expander features a small size body, and it is equipped with two Nickel Titanium **MEMORIA®** leaf springs allowing the release of calibrated and continuous forces to promote the expansion of the maxillary arch. Re-loading is needed when the two opposing leaf springs move apart: the endoral activation, which must be done in the dental office, will put the springs in contact again thus allowing the release of the selected force. The expander is available in two models, 450 g and 900 g and each one of these is available in two expansion capacities: 6 mm and 9 mm. The expander is supplied with the leaf springs (2 or 3 according to the size) ready-compressed by two metal staples that the technician will remove after the construction of the device.

The package includes a special clip with safety leash to keep the leaf springs compressed, facilitating the technician and the clinician in specific phases of the realization and treatment. Inside the package are also available practical instructions for use where all the construction steps and methods of delivery to the clinician are illustrated.

Supplied with a swivel key with handle to facilitate the endoral activation by the professional.

Pack of 1

Swivel key and clip included in the package

EXPANSION MEASURING GAUGE FOR LEAF EXPANDER*

Helpful to verify the expansion gained and the need to activate the expander or compress the springs again. Easy to place design, it makes easier to check the expansion value directly into the mouth.

Made of steel, suitable for hot and cold sterilization.

Pack of 1

LEAF *self*
EXPANDER®

MEMORIA® LEAF SPRING
SELF-ACTIVATED EXPANDER*

It includes all advantages of the Leaf expander without the need for periodic reactivation. The effectiveness of this expander is based entirely on the elastic capacity of the leaf springs made of Nickel Titanium that release controlled and continuous forces. The choice of the expander is decided on the basis of the transversal discrepancy of the patient: the therapy is predetermined and does not require any further action either by the clinician nor by the patient. The expander is available in two models, 450 g and 900 g and each one of these is available in two expansion capacities: 6 mm (four leaf springs) and 9 mm (six leaf springs). The expander is supplied with leaf springs ready-compressed by two metal staples that the technician will remove after the construction of the device. The package includes a special clip with safety leash to keep the leaf springs compressed, facilitating the technician and the clinician in specific phases of the realization and treatment. Inside the package are also available practical instructions for use where all the construction steps and methods of delivery to the clinician are illustrated.

BABY RPE EXPANSION SCREW*

Developed with the assistance and clinical experience of Prof. Nicola Veltri, the RPE baby expansion screw is intended for the rapid expansion of the palate suture, and is available with either 2 or 4 arms. The model with 4 arms may be an alternative to the expander A0620, while the model with 2 arms may be an alternative to the expander A0621. Supplied with a swivel key with handle and instructions for use to facilitate the patient endoral activation.

ARM BENDING AND SELF-LOCKING INSTRUMENT* FOR EXPANDERS

Handy instrument to firmly hold the expander; it allows for easy and accurate modeling of the arms along with the special arm bending P1620-02. The instrument ends, with a clutch mechanism, are shaped on the model of expander to avoid damage to the bodies and are kept closed by a cursor clamp device that is turned on and off with a simple thumb action. The edge thickness of the clutching ends is designed to indicate the minimum space between the body of the expander and the palatal vault. By placing the instrument with the screw on the plaster model, the correct inclination and the right height to bend the arms will be clearly visible. It is also useful to test the expander prior to use by opening and closing the expander with the special straight key.

A0558-01 SWIVEL KEY WITH ACTIVATION TURN COUNTER*

The A0558-01 key is characterized by a "click" after each activation turn which can be heard by the user to control the activation turns of the expander in the oral cavity. A counter on the rear part of the handle enables the easy activation turn control by the patient.

Pack of 10

1 Find the first visible hole of the expander located in the oral cavity

2 Place the key with stop into the located hole of the expander

3 By using the handle, push the key to the anterior-posterior direction so as to begin the activation of the expander

4 The activation ends when a "click" is detected by the key that exceeds the offset limit on the circular end of the handle (1 click equals 1/4 turn)

5 Pull the key out of the hole when the activation is completed

6 Check that the key has reached the stop on the circular end of the handle

7 Place the tip of the white turn counter on the line corresponding to the number of turn activations done

RAPID MOLAR DISTALIZER

A1730-91 1 case

A1730-99 10 cases

Leone First Class is the perfect appliance to get a rapid controlled distalization of the upper molars, conceived with the technical and scientific cooperation of Drs. Arturo Fortini, Massimo Lupoli and Mr. Massimiliano Parri. The vestibular and lingual tubes are made with **MIM**® technology for maximum comfort and precision. The bicuspid tube is a little higher to compensate the non perfect alignment of molars that may be found in some patients. One turn a day activation produces a distal movement of 0,1 mm sufficient to get molar distalization with a minimum loss of anchorage. The package is supplied with all the components necessary for the construction of the appliance.

Key with safety ring leash included in the package

Pack content: 2 paralleling male screws, 2 paralleling devices and instructions for use

DISTALIZER FAST BACK LEONE

A1760-91 1 case

Fast Back is a device for the distalization of upper molars, developed through the cooperation of Dr. C. Lanteri and Mr. F. Francolini. The Fast Back device provides a translation movement of the molars using a pre-determined amount of pressure. There is no need for the cooperation of the patient thus maintaining a good anchorage control. The principle of the Fast Back distalization process is based on the compression of a **MEMORIA®** coil spring, available either in 200 g or 300 g, which exerts a constant force on the molar. The spring can be re-activated each month through the expansion of the screws in the device. The tube pre welded on the molar band, enables the screw arm to slide smoothly with total control of the direction of distalisation.

The Fast Back kit contains all the elements needed for the construction of a bilateral Fast Back device.

Key with safety ring leash included in the package

ANTISNORING APPLIANCES

A

M.A.D. SERIES LEONE

These intraoral nighttime appliances can treat snoring acting directly on the mechanism which is the main cause of it, pushing the lower jaw in a forward position. Mandibular repositioning pushes forward also the tongue and the epiglottis, spacing them from the uvula, thus to solve soft tissues vibration during the airflow, that is what produce the snore sound. MAD appliances can be used for the treatment of sleep apnea (OSA) since they can solve the rear airways obstruction by restoring breathing capacity during sleeping time. The American Academy of Dental Sleep Medicine claims that the most efficient appliances are bi-maxillary type, custom-made by a dental lab and, furthermore, they must allow an additional advancement over the construction bite position, about 4-5 mm. There are all over the world, many different type of MAD appliances to treat snoring syndrome and sleep apnea: we have decided to accomplish, and improve, the elements for the realization of the most widely used appliances according even with the clinical and scientific proven efficiency. This is our proposal based on the requirements of any clinical specialist: **appliance efficiency, high safety standards and stability and comfort for the patient.**

Pack content:

- 1 upper right screw
- 1 upper left screw

FORWARD! AND FORWARD! MAX RETENTION FEATURES

The upper screws are specifically designed to get a thrust on the inclined plane of the lower unit: the protrusive anterior portion is a **metallic body perfectly angulated at 70°**, while the posterior portion has extensive retention capacity for the acrylic to avoid breakages. The screw mechanism has a **built-in stop** that gives both **perfect friction** and stability during the forward movement, as well as preventing the screw from coming apart once **7 mm** of maximum elongation is reached.

Each upper screw has an arrow clearly laser marked on metal front body, indicating the **direction of activation** to get the forward movement. The screws, both left and right, are specifically manufactured to get a **single direction of activation on both sides** and minimize mistakes. Each directional activation generates 0.1 mm advancement.

The lower wings, one right and one left, are **anatomically shaped for superior comfort** and perfect matching with the 70° inclined plane of the upper screw bodies. The clear material is fully compatible with any orthodontic acrylic resin, while the inner metallic **frame can be anatomically adapted** and incorporated into the resin of the lower splint, to ensure superior strength for the mandibular advancement in adult patients.

P1515-00

FAN-TYPE HAND WRENCH

Thanks to its design, this screwdriver allows to easily tighten the fixing screws for support of the Telescopic Advancer devices.

The plug and tube components are manufactured by using **biocompatible stainless steel with the highest strength** available providing durability to any biomechanical stress. The plug component features a special design that does not permit the disassembling from the tube even when the patient is in wide-open mouth position.

The housings for acrylic are designed to be embedded in the acrylic splint: they feature a **laser welded wire throughout** that can be easily bent to enhance the resin retention and avoid unwanted detachment. The outer part presents a threaded portion to accommodate the square head screws binding the ends of the Telescopic arms.

The **wrench for activation** supplied with the kit can be used in the laboratory to tighten the square head screws.

The same instrument is necessary to activate the square head advancer screw into the plug in the direction indicated by the laser etched arrow: each quarter turn of activation produces 0.1 mm advancement.

The maximum elongation is 7 mm on both sides.

A ruler is laser etched on the wrench handle to check the activation length throughout treatment.

new TELESCOPIC ADVANCER DUAL ANTISONORING KIT

A5120-07
A5220-07

1 MEDIUM appliance
1 LONG appliance

A5120-17
A5220-17

10 MEDIUM appliances
10 LONG appliances

This kit is specially engineered for the construction of an antisonoring appliance with telescopic plugs and tubes and this version is featured by a dual possibility of activation. It can be activated either by acting on the square head portion of the inner advancer screw, or by using the pin of the wrench in the holes close to the square head portion. The two types of activation can be performed thanks to the dedicated extremities of the DUAL activation wrench, supplied with the device. The diameter of the advancer screw has been increased and its resistance is 25% higher than the standard model. The arms are specifically manufactured to have a single direction of activation on both the right and the left side, from the bottom to the top, to minimize the home activation mistakes and eventual asymmetries of the appliance. The advancer screw has alternatively

laser-marked bands that allow to measure the millimeters of protrusion. All the components are made up of high resistance biomedical stainless steel that ensures a high reliability to all biomechanical stresses. The peculiar shape of the telescopic plug and tube keeps connected the upper and the lower splints even when the patient's mouth is widely open. The kit, that is different from the Telescopic Advancer standard only for the Telescopic arms Dual, contains all the necessary components for a fast and precise construction of the appliance and it is made up of:

- 2 telescopic arms Dual (plug and tube), 1 right and 1 left
- 4 housings for acrylic
- 4 housing screws
- 1 Dual wrench for activation

A multiple kit for the construction of 10 appliances is available

	length close	length open	stroke max.	max. activation	4 activations
<p>Telescopic Arm Dual MEDIUM</p>	26 mm	43 mm	10 mm	7 mm	0,4 mm

REFILLS FOR DUAL TELESCOPIC ADVANCER

A5121-00

Housing screws and Dual wrench for activation

Pack content:

- 4 housing screws
- 1 Dual wrench for activation

A5121-01

Housings with screws and Dual wrench for activation

Pack content:

- 4 housings for acrylic
- 4 housing screws
- 1 Dual wrench for activation

A5121-02

Telescopic Arm Dual MEDIUM

Pack content:

- 1 Telescopic Arm Dual MEDIUM right
- 1 Telescopic Arm Dual MEDIUM left

A5221-00

Telescopic Arm Dual LONG

Pack content:

- 1 Telescopic Arm Dual LONG right
- 1 Telescopic Arm Dual LONG left

The Dual activation wrench can be used to activate the Telescopic arm by acting on both, the square head of the advancer screw and the hole close to the square head.

The direction of activation is laser marked on the Telescopic arm and it is the same for the Telescopic left and right arms (bottom to top). Each quarter turn of activation produces 0.1 mm advancement: the maximum elongation is 7 mm on each side.

The inner advancer screw has laser marked bands that, alternating with unmarked thread portions, allow to measure the amount of protrusion. Another element that allows a better perception of activation is the black arrow alternatively laser marked on the square nut.

In addition, a ruler is laser marked on the handle of the Dual wrench for activation, that allows to verify the millimeters of activation carried out during treatment.

PLATE HOLDERS

WIRES AND WIRE FORMS

C

In our Centre for Biotechnological Research "Marco Pozzi", the Shimadzu micro hardness tester and the Instron testing machine are used for the verification of the mechanical properties of the wires.

Leone orthodontic wires are available in a range of alloys and different grades of elasticity and hardness to meet any therapeutic requirements. The mechanical properties of the wires are constantly checked to ensure consistent quality.

All Leone wires are supplied in a practical packaging either in rolls or in straight wire sections.

The range includes laboratory wires made of stainless steel, chromium cobalt alloy, which can be heat-treated, and **BIOSTEEL**® nickel-free content.

The numerous forms of archwires available are manufactured from various alloys:

- stainless steel with different mechanical properties to meet all orthodontic requirements;
- nickel titanium alloy, available as **MEMORIA**®, **THERMOMEMORIA**® and **MEMORIA**® **NATURA**®, releasing gentle but constant forces, it can be formed into a large variety of shapes;
- nickel-free titanium molybdenum alloy, available as Beta **MEMORIA**®, featuring exceptional pliability and elasticity as well as low friction.

The Leone packages for wires feature a special accurate design. Clasp and Crozat wires are packaged in anti-rolling coiled spools while straight wires are packaged in triangular shaped tubes to prevent rolling out from the table. All Leone archwires are packaged in little envelopes that clearly show the part number, the dimensions, the product features and the lot number.

CLASP WIRE

LEOWIRE® ROUND SPRING HARD WIRE

Chromium stainless steel alloy.
Diamond drawn to obtain highly resistant and stainless levelled surfaces. Suitable for all orthodontic applications.

BIOSTEEL® ROUND SPRING HARD WIRE NICKEL-FREE*

Stainless steel alloy purposely made to prevent any nickel allergic reactions (Cr 16,5%, Mn 11%, Mo 2,7%, N 0,5%, balance Fe).
Suitable for all orthodontic applications.

**Nickel trace elements of $\leq 0,05\%$ are due to the process of manufacturing*

CHROMIUM-COBALT WIRE

Heat-treatable chromium cobalt alloy, stainless and tough. Its tensile strength allows clasps, even difficult ones to be easily shaped, without breakage. It is self tempering during soldering or heating at 450° C. Necessary for any Crozat wire technique.

STRAIGHT RECTANGULAR WIRE

An alloy properly designed for orthodontic applications.

Diamond drawn to obtain perfectly square angles and levelled surfaces.

Available in two tempers: spring hard and extra spring hard, it is tested and quality controlled in the laboratory.

C8225-17	.017x.025	C8425-17

BLUE LEOLOY® - soft heat-treatable

It is initially the softest of the two tempers. It is intended for construction of archwires which require considerable bending. After heat-treating (480° C), it will become so hard as stainless steel wires. Recommended for Ricketts technique.

YELLOW LEOLOY® - spring heat-treatable

With slight springer qualities than blue. It is intended for construction of archwires which require considerable bending. It can be used as furnished or can be heat treated (480° C) if greater springback is required.

"AUSTRALIAN" WIRE SPOOLS

It is diamond drawn for perfect levelling of surfaces. The two tempers are laboratory tested and quality controlled. Spools, 8 m

MEMORIA® PREFORMED ARCHWIRES

In a superelastic nickel-titanium base alloy, these archwires provide gentle and continuous forces, reduce treatment time and improve patient comfort. The highly polished surface eliminates any bracket slot friction. Their non-deformability and superelasticity, which are expressed in the continuous force delivery over a wide deflection range, have been tested on thousands of treatments. Available in small, medium and large shape, both upper and lower, they represent the ideal answer to achieve your treatment goals.

MEMORIA® ANATOMICAL ARCHWIRE SELECTOR

Lay the selector on the model and select the right arch shape.

THERMOMEMORIA® ARCHWIRES

An innovation in nickel titanium alloy archwires. According to room or body temperature, these archwires have a different behaviour. These archwires can be permanently bent with a plier at room temperature, but after insertion, at mouth temperature of about 37° C, they revert to their initial programmed shape, providing gentle and continuous forces to teeth. This particular feature makes their insertion into misaligned bracket slots easier and reduce patient's trauma while permitting the use of rectangular wires during early treatment and gaining good torque control of roots during tooth movements.

BETA MEMORIA® WIRES AND ARCHWIRES

In a titanium molybdenum alloy, they feature high elasticity and good bendability with pliers. Highly finished to minimize friction between wire and slot. Nickel free. They are suitable for patients with allergic reactions.

LINGUAL ARCHWIRES FOR IDEA-L BRACKETS

Sections .012" and .014" are made of a special Nickel Titanium alloy allowing light adaptations necessary in case of treatment extension to first bicuspids, thus keeping high elasticity. Section .016" Beta **MEMORIA**® is ideal to optimize the alignment and levelling values obtained.

MEMORIA® RECTANGULAR STRAIGHT WIRE

Nickel titanium base alloy wire which maintains high elasticity and allows sectionals and springs to be easily shaped. Available in .016"x.022".

Pack of 10 wires, 18 cm long

BI-DIMENSIONAL ARCHWIRES BETA MEMORIA®/STAINLESS STEEL WITH HOOK

Specialty arch wires that combine different materials and geometries with the aim of torque control in the front portion during the space closure.

The arches have hooks that once positioned between the lateral and the cuspid, are intended for the application of pull tractions and are used as connector between the parts of the arch wire.

The front portion is made of Beta **MEMORIA**® alloy and is available in .019"x .025" or .021" x .027" for the torque control. The rear portion is made of stainless steel, available in .016"x .016" to promote the sliding of the arch wire into the slot

Pack of 2

nickel titanium coil springs

MEMORIA® COIL SPRINGS

In superelastic nickel titanium alloy, they have always been used in orthodontic treatments. These springs combine the characteristics of coil spring design with the non-deformable properties of superelastic **MEMORIA®** alloy. Available open for compressions and gain in space, closed with wound ends for use with hooks of tubes and brackets.

The type with a ligature wire allows spaces wider than 15 mm to be linked.

MEMORIA® COIL SPRING KIT

For crimping of surgical hooks use plier P1911-00.

Pack content:

3 open coil springs, 15 closed coil springs with wound ends, 15 closed coil springs with wound ends and ligature wire, 10 stops, 10 **MIM®** surgical hooks.

PALATAL BARS

Palatal bars allow controllable movements of rotation, expansion and contraction of upper first molars. Made of heat-treated wire, 0,9 mm in diameter, to increase their tensile strength, they are easy to remove from the tubes for activation.

BANDS

PEDODONTIC BANDS UNIVERSAL

Designed to meet therapeutic needs of pediatric orthodontics by allowing early treatment of patients with mixed or deciduous teeth

made of biomedical steel medium temper

shape and height

designed for the anatomy of deciduous molars

easy fit

to the pyramid-shape of primary molars

laser-marking of sizes

allows the sterilization at high temperatures and an optimal view of sizing over time

useful in the construction

of palatal expanders and space maintainers

free prewelding service

custom prewelding service to any tube, bracket or accessory in the section G

DECIDUOUS MOLARS UPPER AND LOWER

Available in 10 sizes, either for upper and lower, with LASER etched identification number.

The medium temper of biomedical steel used to manufacture the bands allows the adaptation to the pyramidal shape of the primary molars by minimizing the problems of detachment.

Necessary for the construction of palatal expanders and space maintainers.

E6100-00 Upper - PU

FREE PREWELDING SERVICE

High quality service processed with spot welding industrial units. Here below an illustration of standard prewelding service of our tubes and brackets is provided.

The Leone bands are weldable with any tube, bracket and accessory included in the section "G" of catalogue.

	standard preweld vestibular position		standard preweld lingual position	
bicuspid	Bracket is perfectly mesio-distal and occlusal-gingival centered			Central position slightly offset to occlusal
molars	The rectangular tube of bracket is always perfectly centered			Central position

Variation in weld position may be requested if clearly specified when ordering.

To fulfil the execution of each individual welding requirement, we invite you to closely follow the specifications required, by indicating the part number of bands, brackets or tubes desired.

THE FOLLOWING SPECIFICATIONS ARE NECESSARY TO ORDER PREWELDED BANDS:

- type of band: pedodontic, bicuspid, 1st or 2nd molar, upper, lower, right or left
- band size
- type of bracket or band
- rectangular tube or bracket's slot size
- torque, rotation adjustments of tube or bracket
- round tube diameter
- round tube preweld position reflecting the specific prescriptions of the selected tube.

Ready prewelded bands for the most used techniques most in use are available for a prompt delivery (pages 76, 77, 80, 81).

SEATING LUG

It assists in seating the band.

Choose a bicuspid band without a seating lug to preweld any bracket or accessories.

CAUTION:

NO RETURNS OF CUSTOM PREWELDED MATERIAL WILL BE ACCEPTED FOR ANY REASON.

TORQUE

(+) = lingual torque of root
 (-) = buccal torque of root

ANGULATION

(+) = distal angulation of root
 (-) = mesial angulation of root

The orthodontic brackets illustrated in this catalogue are not intended to be a duplication of any other existing system nor does Leone SpA imply that they are endorsed by the above mentioned doctors or Schools in any form.

On request, all direct bonding brackets are also available in bulk packages of 100, with the exception for those with plastic positioner, in ceramics, monocrystalline sapphire and self-ligating.

*MBT is a Trademark of 3M Unitek

Inter.\activeSL

ball hooks

perfectly spherical and low profile for maximum comfort

MIM® technology

the ideal technology for the complexity of the design, maximum accuracy of slot and under tie wings

tie wings

for the application of any kind of ligature in the eventual need for a biomechanical total control.

spring clip

beveled slot on mesio-distal edge

allows sliding of archwires for heavy misalignments, while avoiding notching and binding.

made of a highly elastic alloy, it guarantees easy and safe open/close movements. The sliding portion of the clip is constrained between the base and the body of the bracket by a laser welding that prevents the possibility of detachment

MAXIMUM COMFORT AND VERSATILITY

InterActive SL self-ligating brackets, due to their design and reduced dimensions, offer a very comfortable treatment for the patient without loss of control. The interactive clip ensures an efficient clinical management with progressive biomechanical control to take advantage of the low friction early in treatment stages, while achieving perfect finishing with the final archwires.

MATERIAL & DESIGN

The bracket body is made of biomedical steel and is laser welded on the 80 mesh gauge base with FDI identification. The colored dot with disto-gingival identification indicates each bracket quadrant, with the same color code of all Leone bracket range.

INTERACTIVE CONTROL

The specific shape of clip and slot of InterActive brackets allows the user to modulate the most appropriate level of friction force between bracket and wire, depending on the needs of the various stages of treatment.

Passive phase

First stage round arches are not bound by the clip: the low friction will facilitate the process of alignment and leveling

Interactive phase

Rectangular arch wires, used for space closure, rotation, and torque control, work to elastically deform the clip for the biomechanical control necessary in these stages of treatment

Active phase

Rectangular arches for finishing and detailing completely fill the slot while going into active contact with clip: this allows the exploitation of elastic properties in order to obtain minimal movements for finishing of treatment.

EASY OPEN/CLOSE

The clip has a central hole and does not require any special tool for opening and closing.

Opening

Insert the tip of a probe or utility tool into the hole in the clip and move towards the occlusal plane

Closing

Slide the clip with a slight pressure towards the gums using a tool tip or even just a finger

*MBT is a Trademark of 3M Unitek.

The orthodontic brackets illustrated in this catalogue are not intended to be a duplication of any other existing system nor does Leone SpA imply that they are endorsed by the above mentioned doctors or Schools in any form.

Leone offers a wide selection of D.B. brackets with all the options for traditional techniques.

Standard metal brackets are brazed with a special palladium base alloy to 80 gauge mesh sintered pads to assure high bond strength to the tooth with any kind of adhesive.

Bonding pads are anatomically contoured for a perfect fit to the tooth.

Brackets with hook are manufactured with **MIM**[®] (Metal Injection Moulding) technique which Leone is a leader of.

All the other types of standard metal brackets are manufactured from stainless steel profiles medical degree by means of computer aided machines.

Smooth and rounded contours to guarantee the maximum comfort for the patient and to facilitate the elimination of the plaque.

The pre adjusted brackets feature a distal-gingival identification dot to simplify the application in the mouth.

All Leone brackets are supplied in pleasant and ergonomic packages.

disto-gingival identification dot

featured on the pre adjusted brackets to simplify the application in the mouth

rounded edges

to ensure the best patient comfort

anatomical bonding base

designed to match the anatomy of the tooth

brackets with hook

manufactured with **MIM**[®] (Metal Injection Moulding) technology

The identification of Leone standard brackets is easy:

A colour dot identifies the disto-gingival edge on standard brackets pre adjusted with torque and angulation values.
Caution! The colour dot must be always disto-gingival positioned.

A bevel may be present on lower anteriors which has to be always positioned to the incisal side to minimize occlusal interference.

High tie wings on bicusps have to be positioned to the gingival side for ease of ligation and to prevent gingival impingement

Ball hooks have to be always positioned to the gingival side.

There is no difference in the placement for brackets without angulation or torque adjustments and not colour coded.

PACKAGES

All brackets are exclusively sold in original Leone packaging: kits of 1, 10, 25, 50 cases and refill packages of 10. Each single-case kit is sealed closed, providing a guarantee of hygiene and cleanliness when opened in the presence of the patient. The back label displays the product code, description, lot number and product symbols.

The 10-case kits are made with ABS plastic. A large label on the kit cover displays the product code, description and lot number; the same information is also clearly displayed on the front drawers of the conveniently stackable Leone kits.

Inside the trays, a clear plastic cover protects the brackets, as well as provides information pertaining to their correct placement.

D.B. BRACKETS WITH PLASTIC POSITIONER

Available in the Edgewise, Super Edgewise, Tweed, Ricketts, Andrews, Boston, Roth system only for prescriptions of metal brackets.

The vertical shape of the plastic positioner facilitates the alignment of the bracket with the tooth long axis while the incisal edge gives the exact occlusal-gingival position.

Pack of 5

IDENTIFICATION SYSTEM OF EACH SINGLE TOOTH

The mouth is color coded by quadrant like the pre adjusted brackets.

Each plastic positioner is marked with a number identifying each tooth.

Colour of positioner

UR	BLACK	GREEN	LR
UL	RED	WHITE	LL

HOW TO ORDER BRACKETS WITH PLASTIC POSITIONER

Part numbers are the same of the corresponding D.B. regular brackets.

In replacement of the hyphen, a letter identifying the single tooth has been inserted.

The part numbers of the kits are the same as the equivalent kits without plastic positioner, but in replacement of the hyphen, the letter "J" has been inserted.

Upper right black					Upper left green					
code letter	I	G	E	C	A	B	D	F	H	K
tooth	5	4	3	2	1	1	2	3	4	5
	5	4	3	2	1	1	2	3	4	5
	W	T	R	P	N	O	Q	S	U	X
	Lower right red					Lower left white				

Example:

$\frac{2}{2}$ **F2022-31** = **F2022C31** black positioner $\frac{2}{2}$
 Edgewise .022 **F2022D31** green positioner $\frac{2}{2}$

DIGITALLY-ASSISTED INDIRECT BONDING SYSTEM*

This is an innovative system of indirect bonding of brackets developed with a dedicate software for the correct digital mapping of brackets joined with the orthodontist's prescription plan and method used. Starting from the position of the brackets, the software plans a transfer-bite, made with high precision 3D printing scanner to get the accurate clinical reproduction of what digitally planned. For info and updates: www.3dleone.it

1 The Leone plug-in for Maestro 3D software (www.age-solutions.com) is dedicated to digital positioning of our brackets. The software library contains the most popular brackets among our range that are placed automatically on the teeth, based on typical settings of the prescription but, if desired, even in a completely customized mode.

2 Once all brackets have been ideally placed, the software automatically displays the specific altimeters and draws a transfer-bite with rectangular seats for the insertion of the occlusal portion of the positioner.

3 Once the transfer-bite is ready, the brackets must be joined physically to each corresponding positioner: thanks to the special design of the inter-bracket tie wing portion, the union with the bracket is stable and removable at the same time for the next clinical phase.

4 The rectangular occlusal portion is placed into the corresponding location on the transfer-bite: in this way, the bracket preloaded with the adhesive on the base will be placed onto the previously conditioned tooth, in the exact position planned digitally.

5 The use of the altimeters minimizes the thickness of the adhesive under the bracket and allows ease of removal of any adhesive excess before curing.

6 The removal of the altimeter, thanks to its special design, is easy and does not cause any bracket detachment, which possibly may happen with the use of thermo-stamped transfer trays.

POSITIONERS FOR DIGITALLY-ASSISTED SYSTEM

F6100-04 Pack content: 4 sets, 20 positioners each, for Logic STEP 2.0 technique and additional 16 positioners for tubes F8321M12/13/16/17

F6200-04 Pack content: 4 sets, 20 positioners each, for Logic Roth technique and additional 16 positioners for tubes F8321-02/03/06/07.

The positioners for brackets are individual for each tooth and marked according to the FDI system. They can be detached from the holder using a scalpel. The positioners for tubes are also individual, marked according to the FDI system and for exclusive use with the above indicated tubes.

*PATENTED

D.B. METAL BRACKETS

with FDI identification

anatomical 80 mesh pad

for excellent bond strength with the use of any adhesive, bicuspid features a bonding pad extended to occlusal to minimize interferences

ball hook

MIM[®] injection molded and integrated on cuspids and bicuspid

central scribe line

laser marked between tie wings and identification disto-gingival dot for ease of placement

FDI system marking

on the mesh pad

An FDI (Fédération Dentaire Internationale) identification number is laser marked on the mesh pad of every bracket, clearly indicating the tooth to which a specific bracket will be attached. This method identifies each tooth with a two-digit Arabic number: the first digit indicates the quadrant, the second identifies the tooth according to Palmer's notation. For example: the bracket for the upper right central incisor has got number 11 laser-marked on the mesh pad. The number, permanently etched and free of toxic substances, is immediately recognizable and easily readable without the aid of magnifying lenses.

The FDI system laser marking also improves bond strength.

D.B. brackets Diagonal Round with FDI identification

Diagonal Round angulation

for easy bracket placement

anatomical 80 mesh pad with FDI identification

for excellent bond strength
with the use of any adhesive

maximum comfort

thanks to reduced sizes
and rounded edges

MIM® integral ball hook

on cuspids and bicuspid

D.B. brackets Diagonal Round with FDI identification

D.B. BRACKETS DIAGONAL ROUND

Manufactured using **MIM**® technology, in stainless steel welded on 80 gauge mesh sintered pads to ensure a secure bond strength to the tooth. Diagonal Round angulation, torque-in-base and calibrated sizes optimize biomechanics thus decreasing therapeutic time.

Single piece bracket **MIM**[®]

- Precision
- Constant quality
- No soldering points
- Computer designed anatomical bond bases
- Excellent bond strength
- Biocompatibility
- Patient comfort

FDI system marking

on the mesh pad
(for Roth prescription)

high retention base

with micro cavities to ensure
strong retention to the tooth

MIM[®] technology

perfectly rounded edges
for maximum comfort

Extremo nickel-free* brackets are entirely biocompatible. They are CAD designed to get anatomical fits and **MIM**[®] moulded in single piece, without any soldering point. The anatomical base features highly retentive micro cavities for a perfect bond strength and rounded edges to provide patient compliance. The base on Roth prescription brackets is laser marked with FDI number for immediate identification.

*Nickel trace elements of $\leq 0,1\%$ are due to the process of manufacturing

HYBRID HSDC[®] SYSTEM BRACKETS

The **IBRIDO HSDC[®]** system is an orthodontic method, conceived under the suggestion of Dr. Daniel Celli which combines brackets with .020" and .022" dual slot size.

It optimizes biomechanics, both in extraction or non-extraction cases, thus managing friction and maintaining control of anterior teeth. Treatment time is considerably reduced with more predictable results

Anterior brackets have a slot of .020" while cuspid and bicuspid brackets have a slot of .022"; this dual slot size thereby gets full advantage of the low friction in the early stages of treatment and effective torque control during en-masse retraction of the anterior teeth.

hscd[®] brackets are now all twin conventional brackets which allow the change of friction delivery depending on the use of low-friction **SLIDE** ligatures, either conventional or metal, optimizing the sequence of archwires according to malocclusion and therapeutic phase.

The vertical slot .020"x.020" on cuspid and bicuspid brackets allows the use of uprighting springs, very useful in the management of anchorage and bio-mechanical control.

Pack of 10

Logic Line brackets combine the most recent evidence-based studies on low friction biomechanics with reliability and ease of use of twin brackets. The possibility of using either **SLIDE*** low friction ligatures or conventional ones, enhances a versatile therapeutic option not allowed by other methods.

Logic Line brackets are available in metal, ceramics or micro-filled copolymer in Roth and Step prescriptions.

Logic Line

Optimized design for use with **SLIDE** low friction ligatures

For digitally-assisted indirect bonding system see page 99.

housing in the wings

integrated in the bracket profile for easy placement of **SLIDE** ligatures

MIM® technology

with the use of biomedical grade stainless steel

80 mesh pad

ensures ideal retention with any adhesive available; FDI identification

When used with the **Logic Line** brackets, **SLIDE** ligatures are kept safely in place and integrated in the bracket profile due to the housing in the bracket labial side. The **SLIDE** low friction ligatures can be easily applied to the **Logic Line** brackets using a simple, two-stage procedure:

Apply **SLIDE** ligature in the open position and arch wire inside the slot

without the use of special instruments, close **SLIDE** ligature down on the lower wings.

The **Logic Line** brackets, due to the large mesio-distal dimensions and the twin tie-wings, can be used with conventional ligatures, for maximum biomechanical control during the appropriate phases of therapy. Further options are available to the clinician seeking optimum anchorage and biomechanics. It is now possible to use low and high friction in selected areas of the arch, upper and lower, or independently.

STEP 2.0 D.B. bracket system

STEP system

2.0

in one group of teeth with the benefit of being able to use the biomechanical properties more suitable for the therapeutic stage and the kind of wire you are using. The innovative Bi-dimensional* arch wires and the elastic Tie Back, brand new in the design and material, deliver a controllable traction force extension with a perfect control of torque on the anterior teeth, thus favoring the sliding in the rear portion.

Brackets with vertical slot for cuspid and bicuspid, with the same in-out values, allow the use of springs and auxiliaries for greater biomechanical and anchorage control.

STEP 2.0 prescription is complemented by a renewed and optimized archwire sequence for each therapeutic stage.

Bibliographic references are continuously updated on the website www.leone.it

STEP 2.0 system is an optimization of the well-known Straight Wire **STEP** treatment which has been used for more than 10 years. Thanks to the clinical experience of Dr. Arturo Fortini and his partners, the **STEP 2.0** system has become even more efficient and versatile, thus making the orthodontic treatment easier than ever.

Logical management of friction is always possible with the use of the **SLIDE** low friction ligatures and/or alternatively, with the conventional ligatures only

*Patent No. US 6,811,397 B2

ALIGNMENT AND LEVELING

Nickel-titanium **MEMORIA**® super elastic arch wires deliver constant and light forces. The use with **SLIDE** ligatures is recommended.

FULL EXPRESSION OF THE BRACKET TIP VALUE

Australian arch wires are ideal for the consolidation of the first stage of treatment, thus giving full expression to the bracket tip values. They are used with conventional ligatures.

TORQUE CONTROL

The **MEMORIA**® full-thickness arch wire produces third-order movements by stimulating the roots with light and constant forces. For use with conventional ligatures.

SPACE CLOSURE

The innovative Bi-dimensional* arch wire has the front portion made of Beta **MEMORIA**® alloy, available in .019"x.025" or .021"x.027" for torque control, and a rear portion made of stainless steel in .016"x.016" to promote the sliding of the arch wire into the slot. Conventional ligatures are used in the front portion and the Slide ligatures in the rear portion.

FINISHING

The features of controlled elasticity of Beta **MEMORIA**® archwire alloy and the maximum sizes promote the full expression of torque, tip and in-out values of the **STEP 2.0** brackets.

STEP 2.0 SYSTEM STANDARD STARTER KIT

The efficiency of **STEP 2.0** system can be tested during the first stage of alignment and leveling with this kit including:

- 1 case (20 pcs), metal brackets .022" **STEP 2.0 standard system**
- 4 D.B. tubes **MIM®** welded and brazed on **MAXI** base
- 1 **MEMORIA®** round archwire Ø .014" upper
- 1 **MEMORIA®** round archwire Ø .014" lower
- 4 **SLIDE** ligature modules (24 pcs) medium silver
- 2 **SLIDE** ligature modules (12 pcs) small silver

F6100-02 ONE PATIENT KIT STEP SYSTEM 2.0

It contains all the material necessary for one treatment with **STEP system 2.0**. The package is endowed with a pocket that allows the filing of the radiographies and documents related to the patient.

Kit content:

- 1 case (20 pcs) metal brackets **STEP 2.0 standard system**
- 4 pcs D.B. **MIM®** tubes
- 4 pcs tie back
- 1 kit (13 pcs) archwires for **STEP system 2.0**
- 60 pcs **SLIDE** ligatures medium silver
- 60 pcs **SLIDE** ligatures small silver
- 100 pcs ligatures mini modules medium silver

Speed of treatment, aesthetical result and comfort are the ideal requisites for cosmetic orthodontics. The special features of the **Logic Line aesthetic brackets**, combined with **SLIDE*** Low Friction ligatures, fully comply with these requirements. The **Logic Line** aesthetic brackets are available in one range made of **micro-filled copolymer**: a clear coloration assuring a complete aesthetic look on every tooth shade, with high mechanical properties, and biocompatibility, without being subject to staining by oral liquids; one range of brackets in ceramics manufactured with a specific sintering process to achieve the maximum purity of the alumina and polycrystalline structure with an average value of uniform grain. The result is a translucent bracket with a superior mechanical resistance thus assuring a naturally aesthetic look to match every tooth shade.

Available for Step 2.0 and Roth prescriptions.

Logic Line

Pure aesthetics and
logic management
of friction

● MICRO-FILLED COPOLYMER

makes the bracket mimetic
with any tooth colour shade

● CERAMICS

translucence and resistance smooth edges,
low profile, superior in comfort

housing in the wings

integrated in the bracket profile for easy placement of **SLIDE** ligatures

micro-cell pad design

the special design ensures a wider contact
area with the adhesive for a better clinical
efficiency

base with special mechanical retention

no specific primers are required

*PATENTED

D.B. aesthetic brackets STEP system 2.0

Courtesy of Dr. A. Fortini

D.B. BRACKETS STEP SYSTEM 2.0 IN MICRO-FILLED COPOLYMER

Just brush a thin coat of Primer F3107-00 on the base to get a perfect bond retention between the adhesive and the bracket base: bond with the usual adhesive immediately afterwards.

Pack of 10

.022"	F5410-94	F5411-94

mechanical retention

induced by the enforcement of Zirconia micro ball beads over the 2/3 of the surface

maximum comfort

guaranteed by extremely reduced profile and bevelled bracket edges

innovative plasma surface treatment

reduces friction in the slot/arch wire interface and enhances the structural integrity of the bracket

one "step" to the side of the base

favours a firm grip of the tweezers on the mesio/distal surface of the bracket

The extremely reduced profile and bevelled bracket edges minimise discomfort and promote the cooperation of the patient. The diagonal shape makes the correct positioning easier due to the intuitive alignment with the long axis of the tooth. The presence of a "step" to the side of the base favours a firm grip of tweezers on the mesio/distal surface of the bracket, thus avoiding any interference in positioning; it also promotes the identification and elimination of adhesive excess during bonding phases and makes the engagement of the debonding pliers intuitive.

The base is provided with a mechanical retention induced by the enforcement of Zirconia micro ball beads over the 2/3 of the surface in order to ensure the necessary bond strength during the therapy but also allowing for easy and safe removal at the end of treatment. The innovative plasma surface treatment reduces friction in the slot/arch wire interface and enhances the structural integrity of the bracket.

The identification of Leone aesthetic brackets is easy:

A colour dot identifies the disto-gingival edge on aesthetic brackets preadjusted with torque and angulation values.
Caution! The colour dot must be always disto-gingival positioned.

On standard aesthetic brackets a colour dot is positioned centrally.
Caution! The colour dot must be always disto-gingival positioned.

D.B. AESTHETIC BRACKETS

GHIACCIO brackets combine exceptional transparency and hardness of monocrystalline biomedical sapphire with the most sophisticated features that make these aesthetic brackets ideal to meet any biomechanical modern needs for aesthetics and comfort. The extremely reduced profile and bevelled bracket edges minimise discomfort and promote the cooperation of the patient.

AQUA SL

Ceramic Brackets Self-Ligating

base

anatomical curvature of the base for a perfect adaptation to the tooth surface with minimum amount of compound employed for a perfect seal

round hook

maximum patient comfort and safe sealing of elastics

wings

large undercut to seal ligatures and accessories

clip in nickel-titanium

large as the mesio-distal slot width, facilitates the insertion of archwires thus giving the highest biomechanical control

beveled slot

rounded mesial-distal edges to avoid notching and minimize binding

design of anterior edge

with 3 keeper notches which permit a correct central closure for maximum stability during treatment

open/close

reliable over time and elastic memory of the nickel titanium alloy guaranteed

biomechanical dynamic control

the special shape of the clip and the gradual interaction with the wire permit the calibration of friction in the different stages of treatment

passive phase

round archwires do not get in contact with the clip so they can slide inside the slot by facilitating the process of alignment and leveling.

interactive phase

rectangular archwires used for space closure during control of rotation and torque, deform the metal clip elastically with a biomechanical gain control necessary for this stage of treatment

active phase

rectangular archwires for finishing and detailing fill completely the slot by going into active contact with the clip: that permits to take advantage of metal superelastic properties and gets the smallest movements for finishing of treatment

D.B. AQUA SL self ligating brackets *(Not available for U.S. market)*

AQUA SL ceramic brackets combine the highest translucence with biomechanical control performance of interactive self-ligating brackets.

Made with CIM technology (Ceramic Injection Molding) with clip in nickel-titanium. Rhodium plated surface reduces light reflection and ensures minimal visibility of brackets.

D.B. AQUA CERAMIC BRACKETS

AQUA ceramic brackets are manufactured with a sintering process to achieve the purest alumina and a polycrystalline structure with an average uniform grain. The result is a bracket combining the best translucence with a superior mechanical resistance thus assuring a naturally aesthetic look to match every tooth shade. **AQUA** brackets are free of any metal slot and totally anti-allergenic. No specific primers are required since the base has got a new design providing a special mechanical retention, thus allowing the use of any orthodontic adhesive available. Polished surface, smooth edges and low profile design make the **AQUA** ceramic brackets superior in comfort.

D.B. MAXI mesh pad

F2800-00 D.B. MAXI MESH PAD

Each Leone **MIM**® tube is available soldered on the anatomical direct bonding **MAXI** mesh pad. Made of biomedical stainless steel, the anatomical **MAXI** pad is combined with the mesh through a sintering process allowing a perfect joint, without any variation in dimensions and geometry or any reduction in the mechanical retention strength. The selected tube is solder brazed on the mesh pad with a precious alloy under controlled atmosphere to obtain a perfect metal sealed joint and to avoid oxidation in the mouth. These features maximize the bond strength and make this product as an alternative to orthodontic bands.

Hygiene and health of the soft tissues are improved, besides, the positioning of the tube will be more precise.

Pack of 10

80 gauge mesh

optimal with either self/light-cure,
or variable density
orthodontic adhesives

1st molar anatomical
contoured

with positioning "indent"

bonding surface
approx. 50% larger

than mesh pads currently used
with direct bonding tubes

When ordering for customized tubes soldered on the **MAXI** mesh pad F2800-00, the right code number of the tube and the solder position* of the round tube shall be indicated (*which however must combine with the prescriptions of the selected tube).

Minimum quantity per order: pack of 10.

High quality free soldering service made with an industrial process.

CAUTION: NO RETURNS OF CUSTOM PREWELDED MATERIAL WILL BE ACCEPTED FOR ANY REASON.

IDEA-L lingual brackets feature small mesio-distal sizes, 1,4 mm depth and a special bracket design which make the application of **SLIDE** ligatures easy. In most cases, the use of a round wire **MEMORIA**® .012 is sufficient to get the solution of overcrowding and the aesthetical improvement of smile. In cases of dental rotations and/or major misplacements, wires of higher diameter, like **MEMORIA**® or Beta **MEMORIA**®, and conventional ligatures may also be used to gain biomechanical control. To get perfect alignment and levelling of the anterior teeth, an accurate position of the bracket is necessary; it is therefore advisable to use an indirect bonding technique with arch transfer trays made in the laboratory or with the special "jigs" conceived for this technique.

profile of
1,4 mm depth

for patient acceptance and
minimal speech issues

custom design

makes the application of the **SLIDE** ligature
easy and keeps it in place during treatment

SLIDE ligature

embodies the profile
of the bracket, making it
smooth and comfortable

SPECIAL PLASTIC JIG

1

Assemble jig on the
bracket with the **SLIDE**
ligature hooked under
the gingival wing

2

Measure of the height of
the selected jig on working
cast and select correct
size for the best bracket
position

3

Position in the mouth
and polymerization
of the adhesive

4

Removal of the jig
with a rotary
movement

F3140-01 NO-MIX ORTHODONTIC ADHESIVE IN SYRINGES

No mix of components is required. It saves much valuable chairtime. The application is simple and fast. The dense etching gel avoids contact of the acid with soft tissues.

The position of the bracket on the tooth can be adjusted on by 20 seconds from application. A light archwire can be inserted 5 minutes after bonding of the last bracket. Advantages: hygiene, ease of dispensing and handling.

Pack content:

- adhesive in 3 syringes of 5 g each
- 1 activator of 14 g
- 1 etching gel of 9 g
- 40 brushes
- mixing pads and plastic spatulas

REFILLS

Activator	F3141-01	14 g
Adhesive in 3 syringes	F3142-01	3x5 g
Etching gel	F3143-01	9 g

F3107-00 PRIMER FOR D.B. AESTHETIC BRACKETS

Necessary for bonding fiber glass and micro-filled copolymer brackets to enamel with Leone orthodontic adhesive or any other type of adhesive.

Apply a thin layer on to the bracket base prior to usual bonding procedure.

Pack of 8 g

UNIVERSAL BONDING MESH

F2811-00 Thick thread **F2812-00** Large thread

Pack of 1 strip, 10 cm long

F3170-01 LIGHT-CURE ORTHODONTIC ADHESIVE

It allows a precise placement of brackets with easy removal of excess material from bracket base without curing and giving the clinician a prolonged working time. Once bracket is in the right position, just put it under light for 30 seconds to obtain the complete curing process.

Pack content:

- 4 preloaded syringes of 5 g each
- 1 liquid primer of 7 g
- 1 etching gel of 9 g
- 40 disposable brushes
- mixing pads and plastic spatulas

REFILLS

Primer	F3171-01	7 g
Adhesive in 4 syringes	F3172-01	4x5 g
Etching gel	F3143-01	9 g

F3161-01 ETCHING GEL

A 33% orthophosphoric acid gel filled into a convenient syringe of 12 g, provided with thin tip application sticks for ease of dispensing and dosage. Ideal for any type of bonding system. Its gelatinous solidity and the green colour prevent acid from spreading in unwanted areas.

Pack content: 1 syringe and 25 disposable tips

F3110-01 PRIMER FOR BONDING ON CERAMIC CROWNS

Necessary for bonding metal brackets to ceramic prosthesis.

Pack of 6 ml

TUBES AND BRACKETS

Leone buccal tubes are produced in stainless steel with Metal Injection Moulding technology for absolute precision of the slot size and a special bevelled design for maximum patient's comfort.

Every **MIM**® tube and attachment may be pre welded to either **CALIBRA**® o **WEB** bands with free prewelding service or solder-brazed on the D.B. anatomical mesh pad **MAXI F2800-00**, which is first molar anatomical contoured.

Solder-brazing service is free of charge.

Leone brackets are manufactured from stainless steel with a mechanical micro machine working system to get the highest precision of slots. General tolerance is lower than 3/100. Under edges of tie wings are rounded.

All the Leone brackets may be welded on either **CALIBRA**® ou **WEB** bands with a free prewelding service.

Metal Injection Moulding technique

allowing the highest precision of slot

rounded under edges of tie-wings

connectors for laser welding and weldable accessories

CONNECTORS FOR LASER WELDING

Connectors for laser welding are accessories to be welded on the lingual side of the bands. Manufactured with **MIM**® technology, they feature a special fit geometry allowing the hold of the wire or the arm of the expander for laser welding of elements with a different thickness. The three models allow to make expanders, palatal bars and quad-helix with safety and solidity of the welded joints.

ELASTICS AND LIGATURES

Leone offers elastics manufactured with the best quality of latex available.

The innovative low friction **SLIDE*** ligatures are manufactured in a special medical grade polyurethane mix providing all the advantage of low friction biomechanical properties with faster therapeutic times and without the need of extractions. These ligatures are especially indicated for use with Logic Line brackets.

Leone modules for ligatures are stamped from elastomer offering the best elasticity and resistance to oral liquid absorption.

Leone wires for metal ligatures are manufactured out from a high vacuum annealed alloy for the best fit and higher mechanical load.

SLIDE low friction ligatures

mini modules ligatures

wires for metal ligatures

*PATENTED

SLIDE LOW FRICTION LIGATURES

SLIDE is a product manufactured with a special polyurethane mix for medical use. It is applied similarly to conventional elastic ligatures. Once placed on the bracket, it creates a passive ligature on the slot that makes the archwire free to slide and to produce its effects on the dentoalveolar structures. This ligature is especially indicated for use with Logic Line brackets which are featuring a housing to keep **SLIDE** ligature in place for integration in the bracket profile. The particular conformation of the **SLIDE** ligature considerably improves patient's comfort during the first phases of treatment.

72 modules, 6 ligatures each:
24 extra-small, 24 small, 24 medium

SLIDE AQUA LOW FRICTION LIGATURES

Thanks to an innovative manufacturing process, the new **SLIDE** low friction ligatures **AQUA** are not subject to corrosion by oral liquids and are now even more resistant to discoloration (a recurring issue with transparent elastomers). Changing ligatures frequently is no longer necessary and perfect aesthetics is guaranteed. This ligature is indicated for use with Logic Line aesthetic brackets (pages 119-122) which are featuring a housing to keep **SLIDE** ligature in place for the integration in the bracket's profile. Clear color.

K6990-18 THERMORETRACTILE PROTECTIVE TUBE

A thermo retractile plastic tubing for covering of labial arches and lip bumpers. It acts as a bumper to protect the buccal mucous membrane from contact with metal wire for better patient comfort. For wires 1,15 mm (.045") up to 1,80 mm (.071") in diameter.

Pack of 1 m

K0470-00 LABIAL ARCHWIRE TUBE

Made of a chemically inert material, anti-adhesive, non porous, with a very low friction coefficient. Slightly thermo retractile when heated at 150°C.

For wires 0,7 mm (.028") up to 0,8 mm (.031") in diameter.

Pack of 5 m

ELASTOMER PROTECTIVE TUBE

High flexible tube that can easily slip over the arch wire to protect buccal mucosa from damage or irritation. When cut to proper length, it prevents over-closure of spaces.

M

CLASS II CORRECTOR

The non-compliance device for Class II correction. The small sizes of the device allow for optimum patient comfort while the constant and light force delivered by the spring **MEMORIA**® 200 g, located inside the plunger, stimulates the mandibular advancement. In this new version, the fluidity of movement and the strength of the telescopic mechanism are improved. The packages include all the needful parts for the application of a bilateral correction device.

Available in **3 lengths** with both mesial and distal fitting to upper molar tube, for a total of 6 possible positions in the mouth. When used in the mesial position, it can be placed on a single direct-bonding tube without the need of band or round tube.

mesial support

to vestibular tube

distal support

to vestibular tube

To avoid breakage, the device should not be mounted at full compression: once in the mouth in habitual occlusion, a portion of the plunger coming out of the tube for at least **2 mm** should be visible.

*PATENTED

Available in 2 versions:

1 with anterior eyelet

2 with anterior hook

WITH ANTERIOR EYELET	WITH ANTERIOR HOOK	Type	Length at full expansion (passive configuration)	Length at full compression (including 2 mm additional possible compensation, see page 162)	Maximum safety stroke of spring	Maximum opening allowed to prevent disassembly

M2301-91 CLASS II CORRECTOR KIT WITH ANTERIOR HOOK

Pack of 3 correctors with anterior hook (1 extra-short, 1 short, 1 long) and 6 measuring gauges

M2302-91 CLASS II CORRECTOR KIT WITH ANTERIOR EYELET

Pack of 3 correctors with anterior eyelet (1 extra-short, 1 short, 1 long) and 6 measuring gauges

With the help of this measuring gauge, it will be simple and intuitive to figure out which of the three available lengths will be the correct one.

M3052-00

MINI LIP BUMPER BY PROF. NICOLA VELTRI

Designed by Prof. Nicola Veltri: this device is intended for use on patients with deciduous or mixed dentition with lack of space and/or small jaw with either sagittal or transversal dimension. The early application on deciduous molars positively stimulates the development of the mandible. The mini lip bumper is made with a special inclination of the archwire so as the anterior shield is positioned in the area where the lip is highly pushed forward and has a **stop adjustable screw** that makes a precise activation possible without the need of bending the wire. The adjustment of the stop requires the screwdriver REF P1520-00.

Pack of 5

LIP BUMPER

Made of biomedical stainless steel .045" wire.
Non toxic techno-polymer labial coating.

M3050-00 without loops

M3051-00 with loops

4	88	M3051-04	M3051-014
5	92	M3051-05	M3051-015

Entirely made of biomedical spring stainless steel wire: the outer bow measures 1,80 mm in diameter and the single piece inner bow has a terminal portion of .045" (1,14 mm).

The laser welded bows joint, without the presence of solder material, is breakage resistant and avoids allergic reactions due to bimetallism. Midline and number clearly laser marked.

Bright polished for maximum hygiene.

Outer bow is available in three lengths.

Standard size is available with pre-formed loops, bites or double bites, all with the option of hooks for elastics.

Caution: All extraoral facebows are intended for use with Leone M0810 safety modules.

STANDARD EXTRAORAL FACEBOWS

Thanks to the choice of making the inner stainless steel one-piece bow integral with the end portion of .045" (1,14 mm), the realization of loops and/or bayonet stops does not decrease its structural resistance, by ensuring the transmission of extra oral forces to the tubes on the bands.

Outer bow available in three lengths and with the option of elastic hooks.

Caution: all extraoral facebows are intended for use with Leone M0810 safety modules.

EXTRAORAL FACEBOWS WITH PREFORMED LOOPS

Thanks to the choice of making the inner stainless steel one-piece bow with the end portion of .045" (1,14mm), the preformed loops are easily adaptable to the patient needs but also very breakage resistant. Available in five sizes both with hooks for elastics for anteriors or with bite to facilitate lower intrusion.

Caution: all extraoral facebows are intended for use with Leone M0810 safety modules.

FACE MASK

Used for treatment of maxillary insufficiencies, prognathism of the mandible and cleft palate. The reverse orthopaedic pull between maxilla and mandible facilitates the subsequent orthodontic treatment. Made of stainless steel wire and non toxic acrylic, it can be adapted to perform any individual size adjustment, either vertical or horizontal. All attachments are locked by set screws in metal housings. Face masks with zygomatic holds feature an adjustable strap band.

Pack of: 1 face mask, 1 screw wrench, instructions for use into a sleeve for patient

INFORMATION FOR DISTRIBUTORS OF ORTHODONTIC MINI IMPLANTS, "INTENDED USE", "RESPONSIBILITY", "SURVEILLANCE"

The 93/42EEC directive on medical devices is the official reference that dictates the regulations for marketing medical devices. The directive provides indications for all the phases of existence for the device (from the project phase through the traceability system, and surveillance), and it identifies all the characters who have to comply with the directive itself, which includes not only the manufactures, but also the distributors, the buyers, and even the users. As for the responsibilities of the single competence, Leone S.p.A. recommends to its direct clients, dental depots and exclusive dealers to follow and maintain the indications, warnings, and information for the univocal identification of the medical devices, as provided by the manufacturer on the labels, during all the marketing phases. With specific regard to Class IIb implantable products, all dental depots and exclusive dealers of Leone S.p.A. are required to keep records of the distribution of medical devices as of traceability available for verification, in case of need to trace back a product or its user in a univocal way.

TAD INTEGRAL FOR EXPANDER

Leone TAD integral is a mini implant specially designed for the palatal anchorage of expanders during a single phase procedure, when both the appliance and the TADs are applied during the same visit.

The self-drilling tip and the peculiar shape of the TAD thread ensures a simple, minimally invasive surgical procedure and high primary stability.

Made of Titanium grade 5, available in two lengths with \varnothing 2 mm, TADs are supplied sterile and ready to be used with the dedicated handpiece adapter (REF 083-1005-01 and 083-1006-01) or with the manual driver (REF 083-1007-01).

TAD FOR EXPANDER

Leone TAD is a system specially designed for the palatal anchorage of palatal expander with a two-step procedure: the surgical procedure for the TADs application is followed by the impression taking, thanks to the impression accessories, that allows the lab realization and the application of the expander, both hybrid and totally Bone Borne. Made of Titanium grade 5, available in four length and with \varnothing 2 mm thanks to the peculiar shape of the TAD thread ensures a simple, mini-invasive surgical procedure and high primary stability. The emerging portion has an inner thread that, when coupled with the fixing screw, ensures a perfect anchorage with the palatal expander. Once the TADs are positioned in the most appropriate anatomical region and, thanks to the accessories for the impression taking, both conventional and digital, it will be possible to prepare a model with TADs analogs to fabricate the maxillary expander, with high precision and accuracy. TADs are supplied sterile and ready to be used with the dedicated handpiece adapter (REF 083-1005-01 and 083-1006-01) or with the manual driver (REF 083-1007-01).

CYLINDER AND FIXING SCREW

1:1

083-1005-01 083-1006-01
HANDPIECE ADAPTERS FOR TAD

Both for TAD and TAD integral

Made of stainless steel.

Thanks to the centering system, the adapters allow the safe screwing and unscrewing the TADs with the con-trangled handpiece. Available in two lengths. Autoclavable.

Pack of 1

1:1

DRILL EXTENSION

Made of stainless steel.

In case of need, allows to increase the length of the drill and of the handpiece adapters. (REF 156-1019-00 in the Catalogue of Leone Implant System). Autoclavable.

Pack of 1

1:1

083-1007-01
MANUAL DRIVER FOR TAD

Both for TAD and TAD integral.

Made of stainless steel.

Thanks to the fan-type handle, allows to manually screw and unscrew the TADs. It can be also used by the lab for the analog positioning in the 3D-printed model. Autoclavable.

Pack of 1

2:1

043-0001-00
TRANSFER FOR TAD

Made of stainless steel, with a metallic threaded insert, thanks to the coupling with the inner thread of the emerging portion of the TAD, allows to determine accurately and with high precision the position of the TAD with a two material impression technique.

To be used with screwdrivers for fixing screw. Autoclavable.

Pack of 2

2:1

043-0000-35
SCAN BODY FOR TAD

Made of PEEK with a metallic insert, allows to obtain, with high precision and accuracy, the position of the TADs by means the intraoral optical impression or the scan of the dental cast.

To be used with the positioner for Scanbody REF 083-0004-00.

Autoclavable.

Pack of 2

1:1

083-0004-00
POSITIONER FOR SCAN BODY FOR TAD

Made of stainless steel, is used to screw and unscrew the Scanbody for TADs both on the TADs and on the analog for TAD. The top has a hole for the insertion of safety wire. Autoclavable.

Pack of 1

2:1

053-0001-00
ANALOG FOR TAD

Made of stainless steel to reproduce the position of the TADs in the dental cast or to be inserted in a 3D-printed model created by a digital impression.

Pack of 1

2:1

023-1702-20
FIXING SCREW

The fixing screw, made of Titanium grade 5, ensures the correct anchorage of the expander on the TAD. To be used with screwdrivers for fixing screw.

Pack of 2

033-3203-10 1 pc.
033-3203-20 2 pcs.
CYLINDER AND FIXING SCREW

Cylinder in stainless steel with an embedded screw, dedicated for the welding of expander arms or sintered metallic framework. To be used with the screwdrivers for fixing screw.

Pack of 1 or 2

L 12,5 mm

L 20 mm

1:1

083-0001-00 **083-0002-00**
SCREWDRIVERS FOR FIXING SCREW

Made of stainless steel, are used to screw and unscrew the fixing screws and the transfer for TAD.

Available in two length. Autoclavable.

Pack content:

- 1 screw adapter
- 1 hand screwdriver

1:1

083-0003-00
SCREWDRIVER FOR HANDPIECE FOR FIXING SCREW

Made of stainless steel, it is used to screw and unscrew the fixing screw and the transfer for TAD with the handpiece.

Use a max torque of 20 Ncm.

Autoclavable.

Pack content:

- 1 short screw adapter
- 1 handpiece adapter

070-8000-01

SURGICAL AND PROSTHETIC KIT FOR TAD

Made of PPSU plastic material, has been designed to sterilize and keep organized on the surgical field only the instruments necessary for the insertion of TADs and their prosthetics.

The cover when opened tilts the position of the kit and allows an easy access to instruments.

The kit is made up of 7 instruments (it can be filled up to 12):

- screwdriver for fixing screw short
- screwdriver for fixing screw long
- screwdriver for handpiece for fixing screw
- positioner for scan body for TAD
- manual driver for TAD
- handpieces adapter for TAD, short
- handpieces adapter for TAD, long

Entirely autoclavable.

070-0000-00

EMPTY KIT

SURGICAL PROCEDURE

The design of the orthodontic appliance with bone anchorage, requires an accurate planning of the therapy by the clinician, who using his judgment, opinion and preparation, case by case, will consider also all the factors that might arise from pre-surgical exams as: anamnesis, objective exams, radiological, instrumental and laboratory investigations.

Once the surgical site and the more appropriate TADs have been determined, anesthetize the anatomical site. TADs are self-drilling, however in case of high bone density or thickness, it is suggested to drill the cortical bone with the drill for mini implants Ø 1.5 mm (REF 090-1534-00) to insert the TAD more easily.

1 Exert a gentle traction on the vial cap, remove the TAD from the sterile vial.

2 Connect the dedicated handpiece adapter to the TAD head.

3a

3b

Once positioned into the adapter, remove the implant cap with a gentle counter clockwise rotary movement.

4a

4b

Set a maximum speed of 30 rpm and a maximum torque of 30 Ncm, start drilling the TAD in the palatal vault.

The pictures and information described in this page have informative purpose only and they are not intended to furnish any therapeutic advice for the dental surgeon, the dentist, the dental technician or the patient. Leone Spa expressly disclaims any liability neither will furnish any warranty regarding the exactness or the conformance of the information furnished in these pages.

CONVENTIONAL IMPRESSION TAKING

Screw the transfer in the emerging portion of the TAD using the dedicated screwdriver for fixing screw.

2 Take an impression with elastomeric material.

After the removal of the impression, the transfer remains on the TAD, while the negative reproduction of their shape is created in the impression material.

Unscrew the transfer using the screwdriver for fixing screw.

Screw the transfer on the analog.

Replace the assembly analog+transfer into its seating in the impression. The specific shape of the transfer allows to easily perceive when a correct insertion is achieved.
Realize a dental cast where the analogs are embedded.

DIGITAL IMPRESSION TAKING

Insert the Scanbody in the dedicated positioner for Scanbody, ensuring the achievement of the perfect coupling.

Screw the Scanbody for TAD on the emerging portion of the TAD.

Take a digital impression to create a digital model.

SELF-DRILLING

The special design of the devices makes the insertion possible without the need of any pre drilling to prepare the implant site. The endosseous portion of the self-drilling mini implant features one apical portion (2 mm long) drill shaped in order to punch the bone and one threaded portion (1,75 mm in diameter and 6 mm long) with self-tapping coil for anchorage to the bone.

INFORMATION FOR DISTRIBUTORS OF ORTHODONTIC MINI IMPLANTS, "INTENDED USE", "RESPONSIBILITY", "SURVEILLANCE"

The 93/42EEC directive on medical devices is the official reference that dictates the regulations for marketing medical devices. The directive provides indications for all the phases of existence for the device (from the project phase through the traceability system, and surveillance), and it identifies all the characters who have to comply with the directive itself, which includes not only the manufacturers, but also the distributors, the buyers, and even the users. As for the responsibilities of the single competence, Leone S.p.A. recommends to its direct clients, dental depots and exclusive dealers to follow and maintain the indications, warnings, and information for the univocal identification of the medical devices, as provided by the manufacturer on the labels, during all the marketing phases. With specific regard to Class IIb implantable products, all dental depots and exclusive dealers of Leone S.p.A. are required to keep records of the distribution of medical devices as of traceability available for verification, in case of need to trace back a product or its user in a univocal way.

SELF-DRILLING ORTHODONTIC MINI IMPLANTS* WITH CLOSED DUAL SLOT

The head of the mini implant is available in two transmucosal heights and has a **closed dual slot** for the application of wire and/or spring segments. The **closed dual slot** section is .018"x.025" and can accommodate round or rectangular wires. A minimal invasive surgical procedure is needed: in one phase, transmucosal with very good primary stability for immediate application of the orthodontic traction.

Mini implants are supplied sterile, ready to be used with the proper adapter for handpiece or with the screwdriver for hand insertion.

self-drilling orthodontic mini implants

SELF-DRILLING ORTHODONTIC MINI IMPLANTS*

The head of the self-drilling mini implant is available in two transmucosal heights, it is mushroom shaped to facilitate the application of elastic ligatures and coil springs. One stage, transmucosal and minimal invasive surgical technique is needed, with optimal primary stability for the immediate load of the orthodontic appliance. Self-drilling mini implants are supplied sterile, ready to be used with the special handpiece adapter. The use of a surgical micromotor is recommended. In case of use of a contra-angle utilized in the dental office, a complete implant insertion might not be obtained: the use of the Leone hand instruments, such as the ratchet REF 156-1014-00 or the fan-type hand wrench REF 156-1015-00 (page 186), may be necessary.

Pack of 1

		1,75		
			8	002-1708-02

*Available only NON-sterile for the US market

Remove the mini implant from the sterile vial by exerting a gentle traction on the implant cap and connect the handpiece adapter REF 080-1002-00 or 080-1002-01 to the head of the mini implant.

Once positioned into the adapter, remove the implant cap with a gentle counter clockwise rotary movement.

Lean the drilling tip of the mini implant on the attached mucosa in the selected area. Exert a pressure gentle enough to punch the soft tissues till the cortical bone has been reached.

Set the maximum speed on micromotor to 300 rpm and torque value to 40 Ncm. Start drilling the mini implant while irrigating abundantly with water. Immediately after having reached the cortical bone and as soon as the presence of a softer bone tissue has been detected, reduce the micromotor maximum speed to 50 rpm. Complete the insertion under these parameters.

SELF-TAPPING ORTHODONTIC MINI IMPLANTS

Made of stainless steel for surgical use and easily removable once the orthodontic movement has been achieved. They are available either with low or high head, in two types: one with a passing hole on the head and another with a groove and the protruding portion like an orthodontic button to facilitate the application of chains, elastics or springs. A clinical procedures leaflet for the positioning of the Orthodontic Mini Implants may be downloaded from our web site www.leone.it.

080-1001-00
MUCOTOME FOR
ORTHODONTIC MINI IMPIANTS

Circular scalpel to be attached to the handle of the screwdriver Leone Cat. 080-1000-01 for mini implants. With a diameter slightly larger than the head of the mini implants, the scalpel allows to prepare a suitable hole, without the need of any suture afterwards.

080-1001-01
CIRCULAR SCALPEL
FOR HANDPIECE

Designed for the insertion of orthodontic mini implants. Made of titanium surgical grade. It is used with low speed contra-angle allowing the creation of a suitable hole in the attached mucosa. Diameter 2,2 mm

080-1002-00
HANDPIECE
ADAPTER

For use with the contra-angle for the insertion of mini implants also in difficult access areas.

080-1003-00
ADAPTER FOR SCREWDRIVER AND INSTRUMENTS

For use with screwdrivers REF 156-1001-00, REF 156-1001-01 and ratchet REF 156-1014-00 of the Leone Implant System in the application of mini implants in posterior or difficult access areas.

FAN-TYPE HAND WRENCH

Made of stainless steel and anodized aluminium. With hexagonal hole matching the mini implant's head. Sidewise it presents a hole for the insertion of a safety leash. It is necessary to complete the insertion of the mini implant into the implant site. Supplied non-sterile, sterilize under autoclave prior to initial use (REF 156-1015-00 in the Catalogue of Leone Implant System).

PLIERS AND INSTRUMENTS

Leone offers a wide selection of pliers and orthodontic instruments, some of which are marked with the red symbol *** to underline their quality.

These instruments are made of stainless steel of a superior strength and guaranteed against any kind of sterilization processes. Hard metal cutting inserts and tips are gold brazed to the pliers body to afford longer instrument life.

Shape and screw joints are ergonomically designed to meet any orthodontic requirement.

P1900-00 * * *
BIRD BEAK PLIERS
ANGLE STYLE

Necessary for working round wires up to .032" (0,80 mm) in diameter. The beaks are .040" at the tip. A 9° angle is ground on the sides of pyramid beak to allow for wire springback. Beaks are parallel at .020" (0,51 mm) pliers opening.

P1901-00 * * *
LOOP FORMING PLIERS
TWEED STYLE

A pliers designed to make loops in round or rectangular wires up to .022"x.028" (0,56x0,71 mm). The cylindrical beaks has two sections: .043" (1,09 mm) and .063" 1,60 mm).

P1450-00
REPLACEMENT TIPS FOR P1901-00

P1902-00 * * *
LOOP FORMING PLIERS
TWEED STYLE

A pliers designed to make in wires up to .022" (0,56 mm).

P1352-00
FLAT-TAPERED PLIERS
TWEED STYLE

With tapered beaks to form small sized loops and springs.

P1903-00
YOUNG STYLE
PLIERS

For wires up to .040" (1,02 mm).

P1156-00 * * *
OPTICAL PLIERS
MERRIFIELD STYLE

Cone and concave beak pliers in stainless steel with tungsten carbide inserts designed to make loops, omega-loops and distal stops in round and rectangular wires. Approved by the C.H. Tweed International Foundation.

loop forming pliers

P1904-00
LIGHT WIRE
PLIERS

* * *

Longer and more tapered beaks than Angle pliers. Excellent for bending small diameter loops. For wires up to .018" (0,46 mm).

P1130-00
HOLLOW-CHOP
PLIERS

For contouring archwires and forming cuspid offsets.

P1073-00
LOOP CLOSING PLIERS
NANCE STYLE

With 4 sectioned tip for forming various size loops in rectangular and round wires.

For wires up to .028" (0,71 mm).

P1154-00
MEDIUM WIRE PLIERS
OPTICAL STYLE

For wires up to .028" (0,71 mm).

P1155-00
MEDIUM WIRE PLIERS
OPTICAL STYLE

For forming loops in hard clasp wires or labial arch wires up to .032" (0,8 mm).

P1905-00 * * *
RECTANGULAR ARCH PLIERS
TWEED STYLE SHORT JAW

For use with square or rectangular wires. The blades are designed to be parallel at .020" (0,51 mm) pliers opening. Working edges are carefully bevelled with a diamond hone to prevent wire scoring.

P1906-00 * * *
THREE JAW PLIERS
ADERER STYLE MEDIUM

For wires up to .036" (0,91 mm).

P1075-01 * * *
THREE JAW PLIERS
ADERER STYLE THIN

For round wires up to .020" (0,51 mm) and rectangular up to .021"x.025" (0,53x0,64 mm).

P1635-00
TORQUING INSTRUMENT
FOR WIRE .019"x.025" AND .021"x.025"/.027"

A device consisting of two components to easily apply torque to a portion of arch wire in proximity of a specific bracket. The instrument with the U end is used to mark out and maintain the selected portion of the arch wire. The additional instrument is used to firmly keep the rectangular wire and to apply the desired torque degrees. Thanks to the presence of a laser marked protractor, it is possible to check the degrees of torque given.

One instrument end is for arch wires .019"x.025", the other for .021"x.025"/.027"

P1621-00
INSTRUMENT
FOR ENDORAL ACTIVATION

Indicated for multifunctional orthodontic screws.

P1907-00 * * *
HOW STYLE PLIERS STRAIGHT

The 3/32" (2,4 mm) gripping pads are serrated and shaped so that their centre line coincides with the axis of rotation of the pliers. Beaks are rounded to be completely lip safe.

P1908-00 * * *
HOW STYLE PLIERS STRAIGHT

Exactly the same as P1097-00. With 1/8" (3,2 mm) gripping pads.

P1909-00 * * *
HOW STYLE PLIERS OFFSET

Exactly the same as P1908-00 with tips incorporating a 45° offset angle.

P1910-00 * * *
WEINGART STYLE PLIERS

Classical design, the tips are carefully rounded to make this pliers completely mouth safe. Useful for removal of ceramics.

P1912-00 * * *
ARCH FORMING AND CONTOURING PLIERS

With three grooves, for wires .016", .018" and .022".

P1913-00 * * *
ARCH FORMING PLIERS

Without grooves.

P1916-00
DISTAL END CUTTER WITH SAFETY HOLD

The particular design of this cutter allows distal end archwires be cut in the patient mouth safely. It cuts the wire and then safely holds the loose distal end.

- Caution:** maximum cutting capacity:
- rectangular wire up to .022"x.028" (0,56x0,71 mm);
 - round wire up to .020" (0,51 mm);
 - twist wire up to .016" (0,41 mm).

P1915-00
DISTAL END CUTTER WITH SAFETY HOLD

The small dimensions do not interfere with quality. It cuts archwires and safely holds the loose distal end.

- Caution:** maximum cutting capacity:
- rectangular wire up to .022"x.028" (0,56x0,71 mm);
 - round wire up to .020" (0,51 mm);
 - twist wire up to .016" (0,41 mm).

P1914-00
MICRO DISTAL END CUTTER WITH SAFETY HOLD
LONG HANDLES

The retracted position of 10° angled hand grip affords a wider view in the oral cavity.

- Caution:** maximum cutting capacity:
- rectangular wire up to .022"x.028" (0,56x0,71 mm);
 - round wire up to .020" (0,51 mm);
 - twist wire up to .016" (0,41 mm).

P1911-00
STOP AND SURGICAL HOOK CRIMPING
PLIERS

A pliers designed to crimp surgical hooks in the archwire. It can also be used to fix round or rectangular stops.

P1917-00
HARD WIRE CUTTER

* * *

For cutting orthodontic wires for fixed technique any size.

Caution: maximum cutting capacity:

- rectangular wire up to .022"x.028" (0,56x0,71 mm);
- round wire up to .020" (0,51 mm).

P1918-00
45° OFFSET LIGATURE CUTTER

* * *

45° offset for easy access to posterior areas thus eliminating any cheek impingement.

Caution: maximum cutting capacity:

- ligature wire up to .014" (0,36 mm).

P1919-00
MINIATURE LIGATURE CUTTER

* * *

For soft wires.

Caution: maximum cutting capacity:

- ligature wire up to .014" (0,36 mm).

P1099-00
HEAVY DUTY CUTTER

For hard wires up to 1,5 mm.

P1920-00
D.B. BRACKET
REMOVING PLIERS

It guarantees comfort of the patient. The sharp beaks fit under bracket flange and remove it with ease.

P1921-00
D.B. BRACKET
REMOVING PLIERS

Designed to remove bonded brackets easily. The sharp beak fits under bracket flange and removes it with ease. It will also remove adhesive from the tooth.

P1451-00
METAL TIP FOR P1921-00

P1452-00
VINYL TUBE - 15 CM FOR P1921-00

P1922-00
POSTERIOR BAND
REMOVING PLIERS LONG

Necessary for removal of posterior bands. A plastic padded tip and a sharp removing beak allow, with a slight pressure, high precision band removal.

P1923-00
POSTERIOR BAND
REMOVING PLIERS SHORT

Same design and function as P1922-00 but with a short beak for a better occlusal support.

P1403-00
WRENCH
FOR CLASSIX PLIERS

For pliers joint.

P1453-00
REPLACEMENT PAD 3/16" (4,8 mm)
FOR P1922-00 - P1923-00

P1530-00
LABORATORY PLIERS
ADAMS STYLE

Large tips with tungsten carbide inserts. Necessary for bending wires in the laboratory. A round cone tip of 1,3 mm and a pyramid beak of 1,4 mm. For wires up to 1,5 mm. Excellent for Crozat technique.

P1034-00
THREE JAW PLIERS ROUND

Very sturdy, does not score wires. Suitable for bending the arms of expanders. For wires up to 1,5 mm.

P1034-93
THREE JAW PLIERS ROUND
WITH P1620-02

P1099-00
HEAVY DUTY CUTTER

For hard wires up to 1,5 mm

P1162-00
UNIVERSAL PLIERS

Extremely tapered design. For wires up to 0,9 mm.

P1163-00
UNIVERSAL PLIERS

Classic design. For wires up to 0,9 mm.

P1097-00
ADAMS CLASP
FORMING PLIERS NANCE STYLE

For forming Adams clasps and small stops in the archwires. For wires up to 0,7 mm.

balanced
articulated joint

smooth and precise movement

special steel

superior hardness perfect wire hold
resistance to corrosion

ergonomic handles

smooth edges for easy guidance

tungsten carbide
cutting inserts

diamond honed for precise wire cutting
and long-lasting results

hard chrome finish

for high resistance during sterilization

A range of 10 instruments has been selected to meet any orthodontic basic requirement.

Classix pliers and cutters are manufactured with a special and superior hard steel to afford an optimal wire hold and resistance to corrosion of tips.

All **Classix** instruments feature a special inner balanced joint allowing a smooth and precise, long lasting movement.

Classix cutters' cutting edges have tungsten carbide inserts, diamond honed for precise cutting of wires and pliers' long lifetime.

All cutters are entirely hard chrome finished for high resistance during sterilization.

Classix instruments feature ergonomic handles and smooth rounded surfaces to allow the orthodontist for easy handling and best operational precision.

P2101-00
BIRD BEAK PLIERS ANGLE STYLE

Necessary for working round wires up to .045" (1,14 mm). Beaks are only .025" (0,64 mm) at the tip to bend loops and omega loops, even small ones. A 10° angle is ground on the sides of the rectangular beak to compensate for wire spring-back in the modelling stage. Beaks are parallel at .020" (0,51 mm) pliers opening and diamond honed to prevent wire scoring.

P2102-00
OMEGA LOOP FORMING PLIERS TWEED STYLE

Concave beak is contoured for making more uniform omega loops with ease. The round beak has three sections: .045" (1,14 mm), .060" (1,52 mm), .075" (1,90 mm) and made of a hard electro etched alloy to prevent wire slippage. Tip can be easily replaced with the use of the allen wrench.

P2000-01 REPLACEMENT TIPS FOR P2102-00
Pack of 2 tips and 1 wrench

P2103-00
THREE-JAW PLIERS

The central beak is precision aligned and when the pliers is closed, it fits over the level of the two lateral beaks to form bends more acute than 90°. The tips are slightly tapered and diamond honed to prevent wire scoring. For round wires up to .036" (0,9 mm). It allows the activation of quad helix, palatal bars etc. in the oral cavity as well.

P2104-00
UTILITY PLIERS WEINGART STYLE

The tips are shaped to firmly hold wires and devices and perfectly angled to enhance the visibility of the operative field. The two beaks are diamond honed to make it lip safe.

P2105-00
BAND REMOVING PLIERS

When the pliers is closed, the non-padded remover tip does not get in contact with the acetalic resin pad: this allows it to make lever on the tube or the accessory, or on the edge of the band facilitating the safe removal from the mouth.

P2000-02 REPLACEMENT PAD 3/16" (4,8 MM) FOR P2105-00

P2106-00
D.B. BRACKET REMOVING PLIERS

The tapered tips wedge between both edges of the base of the bracket and the tooth surface: by slightly lifting off, the bracket is easily removed without any damage to the enamel. Useful also for removal of ceramic brackets.

P2107-00
RECTANGULAR ARCH FORMING PLIERS TWEED STYLE

For handling square or rectangular wires, torquing and forming precision bends. The beaks are designed to be parallel at .020" (0,51 mm) pliers opening and diamond honed to prevent wire scoring.

P2108-00
DISTAL END CUTTER WITH SAFETY HOLD

Designed for cutting the excess of distal wire and holding the loose archwire safely. The special design and the accurate sharpening of the cutting edges make it to be functional with either thin or coaxial wires.

Caution: maximum cutting capacity: round wires .020" (0,51mm)
rectangular wires .022"x.028" (0,56x0,71 mm).

P2109-00
HARD WIRE CUTTER

The hard construction and the quality of sharpening of the cutting edges allow for use with any section of wire for fixed orthodontics. At maximal closure, the sharpening ends only touch at the tip to ensure precise action with any archwire section.

Caution: maximum cutting capacity: round wires .020" (0,51mm)
rectangular wires .022"x.028" (0,56x0,71 mm).

P2110-00
LIGATURE CUTTER

The tips are 15° angled for better field vision near the bracket's tie wings. The cutting inserts have wide backing ledges to guarantee the maximum anchorage to the body of the instrument.

Caution: maximum cutting capacity: round wires .015" (0,38 mm)

UNIVERSAL BRACKET POSITIONING GAUGES

Made of aluminium and stainless steel. Autoclavable.
Used with either .018" or .022" slot brackets.
Colour coded for immediate identification.

colour		size
green	P1601-00	2 - 2,5 mm
red	P1602-00	3 - 3,5 mm
blue	P1603-00	4 - 4,5 mm
purple	P1604-00	5 - 5,5 mm

P1600-95 Assorted kit of 4

P1509-00 STAINLESS STEEL UNIVERSAL BRACKET ALTIMETER

A small device for measurement of the right height of bracket slots.

P1026-00 D.B. BRACKET TWEEZERS

It holds any type of bracket, from a wide twin to a single one.
Self-locking of the bracket and release by pressure.
Several tweezers can be pre-loaded with brackets to bond them one after the other.

P1098-00
UTILITY INSTRUMENT

P1520-00
SCREWDRIVER

For use with micro spring screws.
Tip of 1,5 mm.

P1630-00
MODELLING SPATULA LE CRON STYLE

P1025-00
DYNAMOMETER

High precision gauge for measuring tensile and compression forces exerted by springs and elastics for a maximum range of 16 oz (0,4536 Kg). It is calibrated with 1 oz. single line and 4 oz double line increments.

P1090-00
CAP REMOVER
FOR CONVERTIBLE TUBES

It makes the conversion of rectangular tube easy when banding of the second molar is required. Autoclavable.

P1090-01
REPLACEABLE TIPS P1090-00
Pack of 2

P1001-01
BAND DRIVER OFFSET TIP

* * *

Fully made of stainless steel.
For placement and adjustment of bands. Activation is ease in all positions.
Seating pressure range 80 up to 1000 g.

P1000-01
BAND DRIVER STRAIGHT TIP

* * *

Exactly the same as P1001-01 but with straight tip.

P1002-01
REPLACEMENT TIP
FOR P1001-01

P1003-01
REPLACEMENT TIP
FOR P1000-01

P1077-00
MERSHON BAND ADAPTER

P1092-00
BAND ADAPTER

Simple, user-friendly and practical.
It allows the band to be adapted to tooth anatomy, without nicking or damaging it.

ARM BENDING AND SELF-LOCKING INSTRUMENT* FOR EXPANDERS

Handy instrument to firmly hold the expander; it allows for easy and accurate modeling of the arms along with the special arm bending P1620-02. The instrument ends, with a clutch mechanism, are shaped on the model of expander to avoid damage to the bodies and are kept closed by a cursor clamp device that is turned on and off with a simple thumb action. The edge thickness of the clutching ends is designed to indicate the minimum space between the body of the expander and the palatal vault. By placing the instrument with the screw on the plaster model, the correct inclination and the right height to bend the arms will be clearly visible. It is also useful to test the expander prior to use by opening and closing the expander with the special straight key.

DENTAL VERNIERS

P1078-15 Long tips

P1560-15 Double tips
Specific for inner and outer measurement

P1622-00
ARM BENDING INSTRUMENT FOR FAST BACK

It facilitates the job of the technician during the construction of the device. It allows to maintain the linearity of the arm which has to slide on the palatal tube. The aluminium handle joined to the tempered steel tube assures a firm grip to get accurate bends.

P1620-02
ARM BENDING INSTRUMENT FOR EXPANDERS

Ideal to bend the expander's arms with ease and precision. Also for expanders with long arms.

*PATENTED

TURRET FOR FORMING RECTANGULAR OR ROUND ARCHWIRES

For forming arch wires with or without torque adjustment.
Available in six different versions and colour codes.
The wire slotted body is made of stainless steel.

P1167-00
TURRET
BLUE code

For forming rectangular arch wires
.016" up to .0215".

P1266-00
TURRET
BLACK code

For forming rectangular arch wires with
torque adjustments: 0° - 10° - 16° - 23°.
For use only with wire: .016"x.022".

P1168-00
TURRET
GOLD code

For forming rectangular arch wires with
torque adjustments: 0° - 7° - 10° - 13°
- 16°.
For use only with wire: .018".

TURRET
PURPLE code

For forming rectangular arch wires with
torque adjustments: 0° - 10° - 16° - 23°.
For use only with wire: .016"x.016".

P1170-00
TURRET
SILVER code

For forming rectangular arch wires with
torque adjustments: 0° - 7° - 10° - 13° - 16°.
For use only with wire: .022".

P1169-00
TURRET
GREEN code

For forming round arch wires:
.014" - .016" - .018" - .020".

P1139-00
LIGATURE TUCKER

Double ended for placement or removal of elastics. Necessary for tucking metal ligatures.

P1500-00
ELASTIC LIGATURE THREADER

It facilitates placement of elastic ligatures under bracket tie wings.

P1576-00
LIGATURE AND ARCHWIRE TUCKER

Useful for insertion of the arch wire into bracket slot. It is also used to tuck metal ligatures and to apply elastic chains.

P1505-01 * * *
TWISTER
FOR PREFORMED LIGATURE TIES
K4430-25 AND K4480-30

Fully made of stainless steel. Push the back button to insert the preformed ligature tie. It makes position and final legation easy.

P1515-00
FAN-TYPE HAND WRENCH

Thanks to its design, this screwdriver allows you to easily tighten the fixing screws for support of the Telescopic Advancer devices.

P0201-00
BENDING INSTRUMENT
FOR TADs ATTACHMENTS

Made of two components, it is useful to customize and adapt the attachments for TADs palatal expanders to every anatomical and treatment need. Both components are made of stainless steel and laser marked.

LIGATURE TYING PLIER MATHIEU STYLE

P1160-00 Tips of 2,5 mm

P1161-00 Tips of 1,5 mm

P1141-00
SEPARATOR PLACING PLIERS

For use with radio opaque separators K6378-00.

P1142-00
LIGATURE WIRE FORMING PLIERS

For soft wires up to .014" (0,36 mm).

P1089-00
MOSQUITO FORCEPS OFFSET

P1088-00
MOSQUITO FORCEPS STRAIGHT

P3000-01
LIP RETRACTOR

Well tolerated by patient, it allows an excellent visibility and ease of use. The plastic retractors are connected by a sturdy steel bridge which does not interfere with the field of vision. Necessary with the direct bonding technique and for taking oral photographs. Autoclavable. Transparent.

P3000-91
LIP RETRACTOR KIT

Kit content:
- 5 couples of transparent retractors,
- 2 bridges.

OFFICE AND LABORATORY SUPPLIES

R

Our **LEOCRIL**® Arcobaleno range of products is composed of an outbreak of colours to be mixed each other, fluorescent additive and glitters, accessories and a series of coloured motifs to be inserted in the appliance which will make the little patients more motivated.

- **low residual of free monomer**
to get bubble free polymerized acrylic plates
- **easy mixing**
diversified particle size of the powder
- **prolonged processing time**
accurate fit of the prosthesis into the mouth
- **very low shrinkage**
of the two components
accurate fit of the prosthesis into the mouth
- **extremely high precision**
excellent friction of the expansion
screws is guaranteed
- **special hardness**
for easy polished surfaces

LEOCRYL® ORTHODONTIC SELF-CURING ACRYLIC RESIN

Specific for orthodontic use, either for spray-on or doughing techniques. The special composition of liquid monomer has careful processing properties, without priming of the curing process (exothermic reaction) which may cause an undesired evaporation of monomer. The use of a Leone hydroflask or pressure pot for polymerization at 40° C with a pressure of 2,5 Atm for 20 minutes is suggested. Hard and perfectly finished plates are obtained as no otherwise possible with other methods.

Regular kit

- R6222-95** A - clear, A - clear liquid, clear powder
- R6223-95** B - transparent pink, B - transp. pink liquid, clear powder

The kit includes:
1 Kg powder, 0,5 L liquid, spray flasks for powder/liquid, funnels, beakers, insulator

Introductory kit - Necessary in the dental office.

- R6202-93** A - clear, A - clear liquid, clear powder
- R6203-93** B - transparent pink, B - transp. pink liquid, clear powder

It includes:
60 g powder, 45 ml liquid

Pack of 1 L

R4550-00
POLISHING FLUID FOR RESIN

Spread some drops on the polishing brush.

Pack of 0,5 L

SILICON MOUNTED POLISHERS

For perfect polishing of plates.
They do not damage hooks or arch wires.
All with 2,35 mm diameter shaft.

Pack of 6

EXTRA HARD PLASTER

R5005-00
Bucket of 5 Kg

R5025-00
Bucket of 25 Kg

Orthodontic plaster type III, snowy white colour.
Mixing ratio: 26-28 ml: 100 g.
Fine detailed, smooth and hard models (over 650 Kg/cm²) are obtained.
Easy to polish with R4520-00.
Ideal for making study models and plaster casts for collection.

GLOSS FOR PLASTER MODELS

R4520-00
Pack of 0,5 L

R4530-00
Pack of 5 L

It is necessary to use a good ortho plaster but also a good final model gloss to obtain a well-made study model. This model gloss provides polish surfaces with fine details and protects them over the time.

BIOCOMPATIBLE THERMOFORMING MATERIAL

Discs and square plates made out of PET-G (Polyethylene Terephthalate modified with Glycol), a thermoforming material ideal to manufacture dental aligners and post-treatment aesthetic retainers. The material conforms to ISO 10993-1, and once formed, it features excellent optical transparency, with highly efficient biomechanical properties.

BIOCOMPATIBLE THERMOFORMING MATERIAL HARD/SOFT

new

Discs and square plates featuring one soft and one hard side. The soft side is made of EVA (Ethylene Vinyl Acetate) and the hard side is made of PET-G (Polyethylene Terephthalate modified with Glycol). Acrylic resin is perfectly combined with the hard side of the thermo-formable material, making it suitable for the fabrication of splints for people suffering from bruxism or as a retentive base in the construction of complex acrylic appliances, such as anti-snoring devices. Once thermoformed, the material will get a high breakage resistance.

R3712-00
QUADRANGULAR WAX STICKS

Wax in 25 cm long sticks, 3x3 mm cross section. The special adherence and high workability make it useful to border the impression trays to fit the edges of the functional impression.

Pack of 110 sticks

R3710-00
UTILITY WAX

Highly soft wax in strips which bends at room temperature without breaking. Thanks to its good adherence and high workability, it serves to border the impressions to obtain the base of the mould.

Pack of 24 strips

R3711-00
MODELLING WAX

Wax in sheets. It moulds, both cold and hot, without breaking.

Pack of 500 g

R3730-00
BITE WAX

Necessary for taking accurate occlusal impressions. A special aluminium foil lessens distortions, 5 mm thick.

Pack of 24

R3714-00
THERMOWAX FOR UNDERCUTS

High melting point: 104° C. Particularly suitable to eliminate undercuts. It prevents damage to be caused to the acrylic brightness.

Pack of 100 g in stick

R3713-00
STICKY WAX

High sticky power. Extreme strength of adhesion to fix the various elements (screws, wires etc.) to the model.

Pack of 100 g in stick

R3716-00
NATURAL PROTECTIVE WAX

Specially intended for orthodontic use. The natural composition of this wax makes it to be absolutely safe and undangerous if swallowed, it does not cause any illness.

Pack of 10 boxes, 5 sticks each

R0221-00
SOLDERS
FOR STAINLESS STEEL

For use with bridges and crowns.

Cadmium free. Silver: 49%.

Melting range: 680° - 705° C.

Pack of wire form, 1 mm in diameter, 10 g approx.

ORTHODONTIC SOLDERS

R0222-00

Wire form, 0,40 mm in diameter

R0223-00

Tape form, 1 x 0,5 mm

R0224-00

Rods, 1 mm in diameter

For all orthodontic brazing works.

Cadmium free. Silver: 55%.

Melting range: 630° - 660° C.

Pack of 10 g approx

R0225-00
SOLDER POWDER

Powder for solders R0220-00 and R0221-00.

Pack of 50 g approx.

R0226-00
FLUX

In paste, for solders:

R0222-00, R0223-00 and R0224-00.

Pack of 30 g approx.

R0227-01
THERMO INSULATOR PASTE
FOR SOLDERS

It protects plaster and resin during soldering procedure. Excellent consistency. Easy to remove with water.

Pack of 235 ml

new

R2300-95
IMPRESSION TRAY KIT

Impression trays made of polypropylene, autoclavable up to 121°C. The anatomical shape and retention holes offer the specialist safe and manageable impression trays.

Available in 4 different sizes, easily recognizable by the different colors: pink, yellow, green and orange.

The kit includes 8 pieces, both upper and lower, 1 pair each size.

R2300-01
IMPRESSION TRAY - PINK
Size 1

The package includes
2 pairs of pink impression trays
Size 1, the smallest size

Pack of 4 pcs:
2 upper and 2 lower

ACRYLIC TEETH
FOR TYPODONT T3330-00

Purposely designed for Typodont T3330-00, they are necessary for making practice with the direct bonding brackets.

Pack of 28 teeth

T1315-00
LEONE HYDROFLASK

Orthodontic cold curing acrylics require the polymerization under pressure technique. This kind of polymerization enables the vaporization of monomer and condensing of acrylic, which will perfectly fit the plaster model. Plates are coming out perfectly finished and can be immediately polished. The Leone hydroflask allows you to make use of the polymerization under pressure technique easily and economically.

Technical features:
Inside dimensions: 100 x 115 mm
Outside dimensions: 111 x 130 mm
Pressure gauge
Exhaust valve
Made of hard aluminium
Built-in thermometer

T1310-00
LEONE HYDROFLASK

With the same features as T1315-00, without thermometer and slightly smaller.

Technical features:
Inside dimensions: 100 x 88 mm
Outside dimensions: 111 x 105 mm
Pressure gauge
Exhaust valve
Made of hard aluminium

REPLACEMENT PARTS FOR HYDROFLASKS

- T2300-00** Hydroflask lid
- T2301-00** Rubber seal for lid
- T2302-00** Air valve
- T2303-00** Thermometer for T1315-00
- T2304-00** Pressure gauge

T1311-00
PRESS FOR HYDROFLASK

Convenient press for hydroflasks T1310-00 and T1315-00, made of pressure cast aluminium. Extremely easy to use.

TRAYS
FOR MODEL BASES

- T3360-00** Blue
- T3361-00** Red

Two drawers for storing six model bases each box.
Outer sizes: 250 x 200 x 80 mm.
Pack of 16 boxes

TRAYS
FOR STUDY MODELS

- T3350-00** Blue
- T3351-00** Red

Two drawers for storing eight models each box.
Outer sizes: 285 x 190 x 55 mm.
Pack of 24 boxes

T3603-00
ACETATE SHEETS FOR
CEPHALOMETRIC TRACING

Sheets with double matt and polish surface. Sizes: 203 x 254 mm.

Pack of 100 sheets

T3608-00
MARKING PENCIL WHITE

For marking arch wires, bite planes, etc.

Pack of 1

T3612-01
CEPHALOMETRIC PROTRACTOR

The angular measurement is facilitated by the ruler; the cut-out tooth symbols of incisors, molars and circular holes assist in the anatomical tracing over the x-ray film.

Pack of 1

T1565-00
SAW

BLADES FOR SAW T1565-00

T1566-00 12 blades for plaster

T1567-00 12 blades for metal

SAW FOR SET-UP

T1561-00 Saw with 1 blade

T1563-00 12 large serrated blades

Easy change of blades and perfect handiness.

LEONE COPOLYMER DUPLICATION PLATES

Sizes: 130 x 140 mm, 2 or 3 mm thick, these plates are made of a special material getting soft and gelatinous at a temperature of 90° C. Just dip in boiling water, lay on the model and press over with the duplicating press: a fine detailed model impression is obtained.

T0900-02 Pack of 50 plates 2 mm thick

ISTITUTO STUDI ODONTOIATRICI

EDUCATION, TRAINING, UPGRADE

ISO Istituto Studi Odontoiatrici, the scientific division and training center of the Leone Company, operates throughout the national territory with the aim of spreading knowledge and promotion of dentistry and implant dentistry at ever higher levels. Founded in 1982, the Florence office is divided over two floors, with a total area of 1,000 square meters and in almost 40 years of activity, it has hosted over 50,000 participants on its courses. ISO offers a complete program of courses from home and either online for dental-surgeons, dentists, specialists in dentistry and orthodontics. Dedicated training courses are also organized for dental technicians and to the product knowledge of orthodontics and implant dentistry, for Italian and foreign traders.

A STATE-OF-THE ART FACILITY

In addition to the welcoming premises reserved for reception and secretarial services, the first floor of the building is completely dedicated to lecture rooms:

- one dental practice equipped with 3 dental units for live demonstrations of orthodontic and implant interventions on patients
- one lecture hall seating up to 40 participants for doctors participating in live demonstrations
- endoral and extraoral cameras connected to the network make all the interventions visible in real time in the various classrooms
- one fully equipped dental laboratory with 18 benches
- one multi-purpose classroom for 80 trainees recently endowed with Active Classroom environment: an integrated Active Board multimedia interactive whiteboard and Active Expressions learner response system with real-time student assessment during the course.

On the second floor:

- the "Marco Pozzi" Lecture Hall seating up to 250 congress participants. The hall is equipped with all multimedia devices.

The didactic tools available at ISO and the high qualified lecturers make any event a profitable and memorable one for every participant.

For detailed information on courses and events visit our website: www.leone.it/english/iso or contact the ISO reception office: Phone +39.055.304458 - iso@leone.it

CATALOGUE SYMBOLS

On the various tables of catalogue we used symbols to better indicate the characteristics of our products. Below are the symbols used:	dimensions		angulation	
	diameter		rotation of tube	
	one turn of screw		inner diameter	
	expansion		torque of bracket	
	length		torque of tube	
	height		slot	

Safety data sheets of our products can be downloaded from our web site: www.leone.it

PRODUCT LABEL SYMBOLS

The label on the package of any medical device set on the market will show the symbols in compliance with the harmonized standards. The symbols marked with a single (*) are based on the ISO 21531, ISO 15223-1 and on the 93/42EEC Directive. The symbols marked with double (**) have been instead adapted by Leone.

manufacturer's trade name and address		catalogue code		code number and product description in different languages				
CE mark (made in compliance with 93/42EEC Directive on class IIA or IIB medical devices)		expiry date, if the product is perishable (year/month/day)		storage temperature				
lot number* (indicated by LOT mark)		for professional use only		this product contains Nickel-Chromium: possible allergic reactions		read the documents enclosed		gamma-ray sterilized
titanium		surgical steel		this product contains Chromium: possible allergic reactions				
autoclavable at temperature indicated		polyethylene		non-sterile				
do not use if package is damaged		polyetheretherketone		UDI Barcode / UDI Datamatrix Unique Device Identification "UDI" for the identification and the traceability of the medical device				
read the instructions for use enclosed		with content or presence of natural rubber latex						
read the digital instructions for use available at the specified website		medical device						

(01) 08033707080893
(10) 21012701
(91) 216C000001
(240) 002-1708-01
(17) 260127
UDI (*)

* Unless otherwise indicated, the LOT number explains the date of manufacture with the key YYMMDDNN (YY year, MM month, DD day, NN Leone progressive internal number of the lot). For example 19021502 indicates the lot no. 02 of February 15, 2019

WARNINGS

The herewith described indications are not claimed to represent a substitution of the clinical knowledge of the licensed Professional. Patient's anamnesis, diagnosis, instrumental and laboratory exams and everything is necessary for a therapy approach must be decided by the Dental Surgeon or the Dental Doctor, who will effect the surgical intervention on the patient and who will be held the sole responsible for such intervention. The indications furnished in this catalogue are to be intended for general use only and restricted to skilled and licensed Professionals who will be held the sole responsible for the construction of the prosthesis. It is clear and accepted by the Dental Surgeon or the Dental Doctor, that the informations contained in the present catalogue have informative purpose only and they do not claim to be a substitution of the specific medical action, nor do they constitute legal relationship among Leone S.p.A., the Dental Surgeon, the Dental Doctor or even the patient. Leone S.p.A. will not assume any liability nor will furnish any warranty regarding the exactness or the connection of the information described in this catalogues.

All rights reserved. No part of this catalogue may be reproduced in any form. Due to continuing product improvements, Leone s.p.a. reserves the right to discontinue products or change the design and materials of products without notice. All Leone products are designed and manufactured for single use and once removed from the patient's mouth, must be disposed of properly. Leone s.p.a. disclaims any liability for the spread of disease or personal injury caused by reuse.

HOW TO REACH LEONE

BY AIRPLANE

from the Peretola airport "A. Vespucci", five minutes by taxi.

BY CAR

- from the highway "Autostrada del Sole", exit Firenze Aeroporto, in the direction of Florence.
 - Along the highway A11, exit Sesto Fiorentino, on your right side the Novotel and Ibis Hotel can be seen
 - **At the first traffic circle, take the third exit;**
at the second traffic circle, turn on the first exit on the right (McDonald's).
- GPS coordinates: +43° 48' 4.85" N, +11° 11' 0.23" E

BY TRAIN

from the central station "Santa Maria Novella", take bus no. 30, get off in Via Pratese near the car dealer Volkswagen.

Call **+39.055.3044620**

or send an e-mail message to **info@leone.it**
for further information on Leone products or a visit to our factory.

You can also visit our web-site:

Layout and realization by: Graphic department of Leone S.p.a
Printed by: ABC TIPOGRAFIA s.r.l. Calenzano, Firenze

Paper has a very significant impact on the environment. To get an idea of the effect that traditional paper has on the ecosystem, just think that it is necessary to cut down 15 trees to produce a ton of paper from virgin cellulose.

The format of this catalog has been re-sized to a smaller format. We have halved the use of paper for printing, saving up 50% on the costs and reducing environmental impact.
